ABOUT THE AUTHOR

Scott Hadley is the creator of *Of Oil and Iron* and founder of Scoutsifer Studio. With a background in marine biology and a lifelong passion for the miniatures hobby, he began developing *Of Oil and Iron* as a way to explore themes of industrial collapse, corporate power and resource scarcity through a unique dieselpunk setting shaped by exaggerated reflections of real-world history and modern global tensions based on his life experiences.

Scott handles the miniature sculpting, visual design, lore development, game design, and overall creative direction of the project. His work is heavily inspired by industrial science fiction and retro-futurism.

SPECIAL THANKS

Thank you to everyone who supported *Of Oil and Iron* through Patreon, MyMiniFactory Tribes, Kickstarter, and the wider community. Your support, feedback, enthusiasm, and creativity helped turn this project from an idea into a living world.

Special thanks to Millie Proud, Daniel Martin, Thomas Cain, John Johansson and Eric Trein for their incredible support during conventions and events, helping bring *Of Oil and Iron* to life beyond the hobby desk.

Special thanks to Ian Hawkins for his invaluable support with rules revision and gameplay refinement throughout development.

And finally, thank you to everyone building Rigs, painting miniatures, and fighting battles across the Smoglands. This world exists because of you.

WELCOME TO THE AGE OF OIL AND IRON

The world is broken. Once-prosperous nations have crumbled beneath the weight of resource scarcity, unchecked industry, and resulting conflict. In their place rose the corporations: vast, ruthless powers that carved the Smoglands into section of corporate rule. Oil fields, shattered cities, and desecrated frontiers are now the battlegrounds where dominion is won not by kings or nations, but by those who can field the most formidable machines of war.

At the heart of this conflict stand the Rigs: colossal, diesel-fuelled war machines forged from the remnants of industry. Each is piloted by an Ironclad, a rare breed of operator whose skill and nerve decide whether their Rig becomes a weapon of victory or a tomb of twisted iron.

© Scoutsifer Studio. All Rights Reserved

No faction is virtuous, and none are without ambition. The oppressive Krim Corporation, the industrious Nox Industries, the rebellious Freegear Coalition, the enigmatic Arcus Technologies, the steadfast Triton Engineering - all march to claim their place in the Smoglands. Alliances are fleeting. Wars are endless. The Smoglands endure.

Of Oil and Iron is a cinematic skirmish wargame that places you in command of a squadron of Rigs on behalf of one of the great corporations or rebel factions. Each battle tells a story: desperate duels across blasted lands, ambushes in ruined streets, and clashes of diesel-fuelled war machines. Customise your Rigs, outthink your opponent, and make your name in the Smoglands.

Welcome to the age *Of Oil and Iron*.

TIMELINE OF THE SMOGLANDS

BEFORE THE SMOGFALL (BSF)

–200 to –150 BSF: The Expansion Age

The world entered a golden age of extraction and invention. Newly discovered oil fields, oil wells in the ocean, and coal mines fed an industrial appetite that seemed insatiable. Entire landscapes were gutted to fuel corporate furnaces. Small family-run workshops gave way to massive corporate foundries, each larger and more ruthless than the last.

The first mechanised frames, precursors to the modern Rig, were developed not for war, but for mining, salvage, and underwater construction. These cumbersome suits were designed to keep workers alive in hostile work sites, a grim foreshadowing of their eventual role in the battlefield.

–149 to –50 BSF: The Rivalry Era

Corporations grew too powerful for governments to contain. National armies were quietly replaced by corporate security divisions, each fielding armoured vehicles and prototype exo-frames.

Competition for resources turned violent. Oilfields were poisoned with sabotage, rail lines cut by mercenary bands, and whole towns enslaved into industrial labour. Rivalries between corporations became entrenched; names like The Krim Corporation, Nox Industries, and Triton Engineering began appearing in ledgers of war rather than commerce.

Civilians adapted to worsening air quality with crude respirators and filtration systems, but the poor suffocated in growing slums. For the wealthy elite, the choking haze was dismissed as the "price of progress."

–49 to 0 BSF: The Descent

Warnings came from engineers, scientists, and a small consortium of researchers who would later become known as Arcus Technologies. They published studies showing that unchecked industry was poisoning the skies beyond repair. Their prototypes for advanced filtration towers and experimental arc-reactors were dismissed as impractical, too costly, or simply a threat to corporate profits.

While the great powers doubled down on extraction, those who founded Arcus retreated into isolated laboratories, continuing their work in secret. Cities by now were already cloaked in permanent dusk. Farmers abandoned dying fields, joining mass migrations toward corporate hubs in hopes of filtered shelter. Riots, food shortages, and industrial disasters spread unchecked.

© Scoutsifer Studio. All Rights Reserved

As the world teetered on the edge, only a handful of Arcus' crude filtration prototypes were quietly installed on the fringes of the industrial belts, faint glimmers of foresight in an age of denial.

Year 0: The Smogfall

The great industrial expansion reached its breaking point. Factories and refineries belched out such vast quantities of soot and chemical fumes that the skies blackened for months on end. Daylight dimmed to a perpetual dusk; the sun became little more than a dull ember behind the haze.

Crops withered in the poisoned fields. Populations suffocated in their homes. Entire regions became uninhabitable without respirators or advanced filtration systems. Governments faltered, powerless to shield their people from the creeping death that spread through the air.

Those who survived did so only behind walls of industry, under the rule of corporations who alone had the means to filter the choking sky. From this moment on, history was no longer measured by kings, parliaments, or nations, but by the smog. The old world as it was ended here.

From then on, all time was reckoned as "After the Smogfall" (ASF).

© Scoutsifer Studio. All Rights Reserved

AFTER THE SMOGFALL (ASF)

0–50 ASF: The Survival Era

Civilisation contracted into islands of life amid a sea of poison. Cities that could not filter the air were abandoned or left to rot. Corporations seized control of the remaining habitable zones, ruling through strict rationing of air, water, food and fuel.

The first militarised Rigs were deployed, modified industrial suits refitted with armour plates and salvaged weaponry. They defended settlements from raiders, scoured wastelands for resources, and enforced corporate law.

It was during this period that the nomads emerged: mercenary Rig pilots who refused corporate allegiance. Some fought for coin, others simply to survive outside the walls of industry.

© Scoutsifer Studio. All Rights Reserved

51–120 ASF: The Corporate Ascendancy

With governments gone, the great corporations rose as the unquestioned rulers of the Smoglands. The great corporations expanded their fortified enclaves into sprawling fortress-cities, sealing their citizens behind walls of iron and filtered air. Economies were rebuilt around salvage, oil drilling, and the mass production of war machines. For most, survival meant obedience.

But not all bent the knee. Outcasts, deserters, and entire communities who opposed these ideals began to gather in the wastes. Salvagers, mechanics, and disillusioned Ironclads pooled their knowledge, building independent organisations powered by scrap and ingenuity. These groups rejected the corporate monopoly on life itself.

From this growing defiance emerged the Freegear Coalition: a loose but determined federation bound together not by profit, but by survival and choice. While the corporations hardened their borders, Freegear's rebels roamed the Smoglands, striking corporate supply lines, salvaging the ruins, and offering refuge to those who refused to live under corporate law.

121–200 ASF: The Age of Endless War

By now, war was no longer an occasional necessity but the driving force of society. Factions bled resources into building colossal Rigs, some the size of towers, armed with weapons capable of levelling city blocks.

Territory changed hands constantly, though rarely rebuilt; burned-out cities became battlefields fought over again and again. Salvage became more valuable than raw ore, as it was easier to strip parts from wrecked Rigs than manufacture them anew.

Citizens adapted to living in near-constant siege. Entire generations grew up in bunkers, never knowing clear skies or peace. To live in the Smoglands was to know conflict.

201 ASF – Present: The Age of Oil and Iron

The Smoglands now stand on a knife's edge. The great corporations continue to fight, their wars fuelled more by ideology and pride than by strategy. Mercenary Nomads thrive, playing one side against another, while scavenger bands pick over battlefields like carrion crows.

Innovation continues, but so does desperation. Experimental engines push Rigs beyond safe limits, leading to catastrophic failures. Cities cling to dwindling resources, while the wastelands grow ever larger.

The future remains uncertain: will the corporations bleed themselves dry, leaving only ruins? Or will a new order rise from the smoke to claim dominion over the Smoglands?

© Scoutsifer Studio. All Rights Reserved

THE GREAT POWERS

Five great forces now dominate the Smoglands, each with their own vision for survival. Some seek control through industry, others through innovation, rebellion, or brute force. Their battles shape the Smoglands, and you must choose where your loyalties lie.

Ruthless aristocrats wielding power through fear, dominance, and heavily militarised expansion, **The Krim Corporation** seeks to conquer. Their Rigs are efficient war machines, engineered for durability and mass deployment. For The Krim, survival is measured in order, obedience, and the strength of the ability to conquer.

An industrial giant, **Nox Industries** expands relentlessly, choking the world with smoke from relentless production. Their Rigs are heavy, brutal, and adaptable, armed with high power weaponry and impenetrable armour. They see themselves as humanity's saviours through ever-growing industry.

Ocean-born survivors clinging to crumbling oil platforms, desperate to reclaim lost influence and resources, **Triton Engineering** defends the last great oil wells with machines forged from repurposed diving suits. Their society is insular and pragmatic, bound by tradition. Every Rig they field is a piece of industrial heritage turned weapon.

Born from visionaries ignored before the Smogfall, **Arcus Technologies** are isolated technological pioneers safeguarding arc-tech, advancing science in a world bent on stealing it. Their enclaves are powered by arc-reactors and advanced filtration towers, their Rigs precise instruments of innovation. Where others see ruin, they see proof that only knowledge can shape the future.

Rebels and deserters building hope from scrap, driven by grit, defiance and the passion for freedom, the **Freegear Coalition** refuse to bow to corporate rule. They fight with salvaged parts, ingenuity, and sheer determination, fielding mismatched Rigs that strike supply lines and free the oppressed. For many in the Smoglands, Freegear represents hope, and a chance to breathe free air again.

THE RIGS

Born from the ashes of collapsing industries, the Rigs are the iron beasts that define the age Of Oil and Iron. Once, they were little more than machines of burden: oil-rig lifters, mining frames, and construction engines, pressed into service when the first resource wars erupted. But necessity breeds innovation, and under the hands of the great corporations, these crude giants were reforged into weapons of war.

A Rig is a walking war machine, powered by brutal combustion engines and clad in armour plate thick enough to shrug off conventional fire. From nimble light frames darting through shattered streets, to colossal class Rigs that grind cities beneath their feet, every Rig is a modular chassis, built to accept an arsenal of weapons and equipment tailored to its Ironclad's need.

At their heart stands a single Ironclad: the pilot who breathes life into the Rigs. Without one, a Rig is a cold husk; with one, it becomes a weapon of terrifying precision. Ironclads endure crushing heat, punishing feedback, and the mental strain of commanding a walking war engine. Many are revered, others feared, yet all are bound to their Rigs.

To the common folk, Rigs are paradox made manifest: protectors and oppressors, saviours and executioners. Their looming silhouettes dominate skylines and battlefields alike, reminders of the corporations' stranglehold over every drop of oil and bolt of steel. Old wrecks litter the wastelands, memories of forgotten battles. Some scavenged for parts, others worshipped like fallen titans. A Rig may outlast its Ironclad, or even generations of them, reborn again and again through salvage and re-arming.

They are not just machines of war, they are the very embodiment of industry's promise and its curse.

Where the Rigs walk, history is written.

GETTING STARTED

Of Oil and Iron is a strategic tabletop skirmish wargame set in the desolate, diesel-fuelled Smoglands, where two or more players command powerful war machines. Each player takes control of a squadron of Rigs, piloted by skilled Ironclads, with custom loadouts to suit their engagement. These mechanical behemoths are more than just weapons; they are the lifeblood of every squadron, and the stories told on the tabletop revolve around their triumphs and failures.

When building a squadron, you may field Rigs from a single corporation to reflect their industrial might and ideology, or mix different designs together. In the Smoglands, borders blur: machines are stolen, salvaged, or re-purposed, and mercenary Rigs march under no banner but their own. This flexibility allows you to craft forces that match your playstyle and narrative, from a lone experimental prototype to a ragtag band of mismatched war machines.

Official *Of Oil and Iron* miniatures are available at **www.ofoilandiron.com**, including Rig Control Terminals, designed to keep your games interesting and engaging.

Many players enjoy a narrative campaign, where each battle is a chapter in a larger story. Others prefer matched play, where carefully balanced squadrons clash in contests of pure tactical skill. Both styles are supported, and both bring the cinematic weight of Rigs to the forefront.

Unlike games of massed armies, *Of Oil and Iron* focuses on small-scale skirmishes, usually 3–8 Rigs per side.

Rigs painted at 15mm scale

Scale

Of Oil and Iron is designed for 15mm scale, making it accessible; models are smaller, meaning they are quicker to print and paint! The board size is smaller, meaning it can conveniently fit on most tables - and terrain is more easily built and stored.

However, if you wish you play at 28mm / 32mm scale, simply double the distances within these rules.

What you need to play

In order to play a game of *Of Oil and Iron*, you will need a collection of Rigs (usually 3-5 each side), a tape measure in inches, a playing surface, terrain, and some six-sided (D6) and twelve-sided (D12) dice. If players choose, they can field as many Rigs as they like in a custom game, if they would prefer a longer battle. Various tokens are provided as 3D printable assets.

To command your Rigs, you may print the provided assets:

- Rig Command Terminals
- Weapon, Equipment and Ironclad cards

Alternatively, you may use the Rig Squadron Roster, a more printer-friendly way to command your forces.

Distances in *Of Oil and Iron* are measured in inches (“) between the closest points of the bases between the models.

Game board size

Designed to fit on a kitchen table for accessible gaming, there are a choice of effective game board sizes:

- 22 x 30 inches - *preferred!*
- 2 x 2 feet
- 3 x 3 feet
- 4 x 4 feet - *for bigger games!*

KEY CONCEPTS

Before entering the Smoglands, all Ironclads should understand the following core principles. These rules underpin every engagement and ensure clarity during play.

Activations

Models (Rigs) are activated one at a time. Models can only be activated once per round. Players take turns activating one model each, until all models are activated, at which point a round will end and all models are available to activate again.

Dice Types

Of Oil and Iron uses D6 (six-sided dice), D12 (12-sided dice) and D3 (six sided dice, where a roll of 1-2 results in a 1, a roll of 3-4 results in a 2, and a roll of 5-6 results in a 3).

Re-rolls

A dice can never be re-rolled more than once. If a rule allows a re-roll, the second result must always be accepted, even if it is worse. Re-rolls cannot be re-rolled by any means.

Natural Rolls

Certain dice results apply regardless of modifiers:

A natural roll of 1 always misses or fails.

A natural roll of 6 normally succeeds, but does not automatically succeed when the required result is 7 or higher. Rolls requiring a 7 or higher are resolved as Improbable Results (see below).

Improbable Results

Some attacks or armour rolls may require a roll of 7 or higher on a D6. These are considered Improbable Results.

To resolve an Improbable Result:

- Roll the dice as normal.
- Discard all dice that did not result in a 6.
- Re-roll each remaining dice.
- If any of these dice score a 4 or higher (4+), the test is successful.

Measuring

All distances are measured in inches (“”).

Distances can be measured at any time.

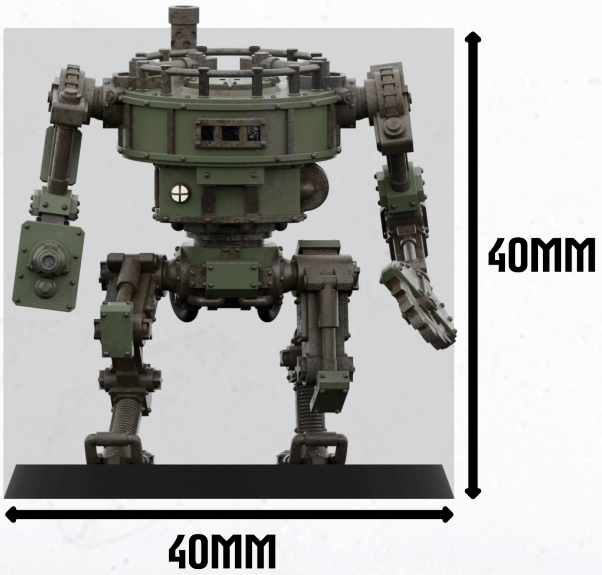
Distances are measured from the closest point of one model’s base to the closest point of the target’s base. Measurements must be taken in a straight line unless a rule states otherwise.

Line of Sight (LOS)

A target must be visible to be attacked.

Each model occupies a volume of space from the bottom of its base determined by its base size. A model’s volume is used for determining if terrain blocks LOS to a model.

A model on a 40mm base has a volume extending up from the base of 40mm. A 50mm base has a volume extending up to 50mm, and so on.



Psychomystile
© Scoutsifer Studio. All Rights Reserved

Steps to determine line of sight (LOS):

A target must be visible to be attacked. To determine line of sight and cover, work through the following steps in order and stop at the first that applies:

1. Can an unobstructed line be drawn to every part of the target's base and volume?

Yes → Full line of sight, no cover.

2. If not, can an unobstructed line be drawn to the centre of the target's base?

Yes → Light Cover.

3. If not, can an unobstructed line be drawn to any other part of the target's base?

Yes → Heavy Cover.

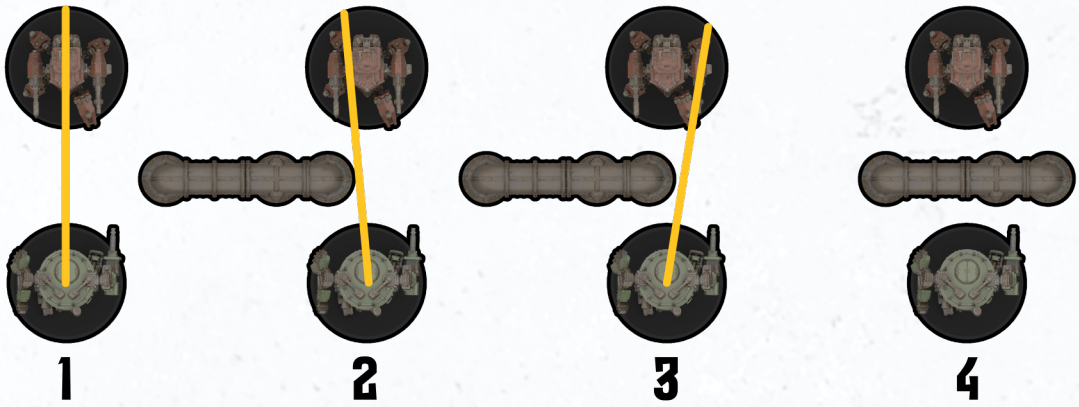
4. If not, the target is not in line of sight and cannot be attacked.

A model's volume rises from its base equal to its base size (a 40mm base has a 40mm volume, a 50mm base a 50mm volume, and so on). Use this volume when checking whether terrain blocks line of sight.

Cover Effects

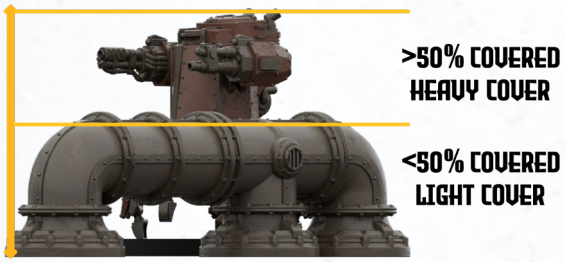
Light Cover applies -1 ACC to attacks against the target.

Heavy Cover applies -2 ACC to attacks against the target.



Psychomystic
© Scoutsifer Studio. All Rights Reserved

If a Rig's base and its vertical volume would grant different cover, apply the more obscuring result. As an alternative to the base-line method above, players may judge cover by how much of the Rig is obscured: if 50% or less is hidden, the Rig is in Light Cover; if more than 50% is hidden but the Rig is still partly visible, it is in Heavy Cover. Both methods produce the same two cover tiers. As terrain collections vary, players may agree a social contract for which pieces count as Light or Heavy cover.



Shooting from behind cover: An active Rig firing from behind cover suffers no line-of-sight penalty for that cover if it is within 2" of the cover between itself and its target.

Firing Arcs

Each Rig has three arcs: Front, Side and Rear.

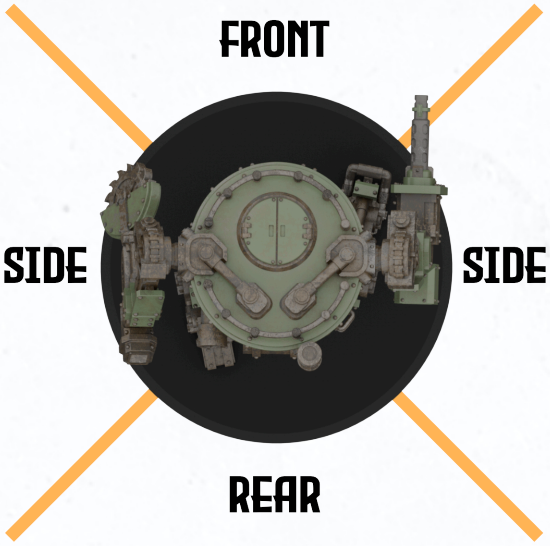
A target is within an arc if any part of its base lies within that arc when viewed from the attacking Rig. Firing arcs determine line of sight, weapon eligibility, and potential bonuses.

If a target lies *exactly* on the boundary between arcs, the attacking player chooses which arc applies.

A rig can only shoot from its *front firing arc,* with some exceptions including from equipment or weapon perks.

Attacks made into a target's side or rear arc will have damage bonuses as described in the attacking section.

Firing arcs are usually painted onto the base of the model.



Rough Terrain

Battlefields and terrain come in all shapes and sizes! Rigs can walk over terrain that is 25% of their height. Otherwise, they cannot pass over that terrain and must move around it.

Rounding Numbers

Whenever a number is rounded, round up to the nearest whole number.

Simultaneous Effects

If multiple effects occur at the same time, the active player resolves them in the order of their choosing.

Rule Priority

If two rules directly conflict, the more specific rule takes precedence.

For example, a weapon rule that modifies how damage is applied will override a general damage rule. If two rules are equally specific, the active player decides the order in which they are resolved.

Rig Control Terminals and other game assets

Of Oil and Iron uses Rig Control Terminals to control each Rig on the tabletop. Rig Control Terminals are provided in two formats. Players have the choice of a printer-friendly terminal where the player fills in all of the attributes for each Rig; or immersive, coloured cards, assembling their Rig with weapons, equipment and pilot cards (known as Ironclads).

SET UP

Before playing a game of *Of Oil and Iron*, it may be useful to see how a game is set up.

1. This Rulebook! You can print off or photocopy the Quick Reference sheet at the back of this book to refer to.

2. Rig control terminal, weapon cards, equipment cards and engine cards for each Rig. Alternatively, you can record all Rig information on printer-friendly Rig Control Terminals.

These cards are provided in sizes that are able to be sleeved. The Rig Control Terminal is tarot card sized (70x120mm) and the remaining cards are mini-European card sized (44x67mm).

3. A squadron of Rigs - 3D printable models, in 15mm or 32mm scale. For 15mm scale, choose from a selection of Light (40mm base), Medium (50mm base), Heavy (60mm base) or Colossal (80mm base) weight classes.

4. A collection of dice: six-sided (D6) and twelve-sided (D12). 12mm D6 are best to track health of the Rigs on the Rig Control Terminals. With the printer-friendly version, you can track Rig health with just paper and pen, if that's your preference.

Psychomystile
© Scoutsifer Studio. All Rights Reserved

5. Tokens: paper or 3D-printable tokens to track critical damage and "Prepare" actions. 2 critical damage tokens per Rig and a handful of the others are recommended.

6. A battlefield and terrain. *Of Oil and Iron* is provided in 15mm AND 32mm scales for accessibility - you can use anything, but readily available game mats are recommended for the best experience! The board pictured is a 56x76cm (22x30") board with 15mm scale Rigs. Feel free to use any board size you wish, to scale up your games!

You can use 3D-printable dieselpunk terrain provided at www.ofoilandiron.com, or you can use any terrain you see fit - it's your battlefield!

7. A friend (or… enemy!) to play against. Use the squadron formation recommendations on page 89 and start building your squadron - or bring whatever you wish for a more narrative experience.

Play stand-alone matches or start a campaign!

CORE RULES

THE RIGS

During the game, each player will control a collection of models, referred to as Rigs, collectively referred to as their "Squadron". Each Rig is operated through a Rig Control Terminal.

Class: Every Rig begins with a base model determined by its weight class. The weight class determines its core attributes and base size.

Light: *40mm base*
Medium: *50mm base*
Heavy: *60mm base*
Colossal: *80mm base*

Speed: The maximum distance the Rig can move in inches.

Aim: The base accuracy of the Rig when making attacks, often modified by weapon traits.

Iron: The weight limit available to outfit the Rig before becoming overweight. Weapons and equipment have various weight, usually the more powerful, the more Iron required to equip.

Weapon Slots: Rigs can be equipped with ranged and melee weapons up to the number of slots on their Rig Control Terminal. Light, Medium and Heavy Rigs have 2 weapon slots. Colossal Rigs have 2 standard weapon slots plus 1 additional Hull slot, which may only be filled by a weapon with the Hull perk. Every Rig must equip at least 2 weapons.

Structure Points: These points represent the overall durability and structural integrity of a Rig's various components: its Hull, Arms, Legs, or the Engine itself. Once a component's Structure Points reach 0, it sustains catastrophic damage. Any further damage disables the component. This is covered in greater detail in "Catastrophic Damage" on page 31.

Impact Location: When a Rig is attacked, a D12 is rolled to determine where the attack lands. The result is compared to each component, where impact locations are represented as ranges in red.

Armour: Representing the ability to be able to withstand or deflect incoming fire. This is listed on the bottom of each component [X].

Equipment: Equipment are non-weapon components that enhance a Rig's capabilities, and cost Iron to equip.

Engine: The engine status is represented by the heat tracker at the top of the control terminal. Each Rig is unique and so are their engines, which perform differently, reacting to heat generation at different increments along the heat tracker.

Exhaust: In the Maintenance Phase, after rolling on the Heat Threshold table if necessary, the engine reduces heat by its Exhaust value.

1. Rig Control Terminal, with 12mm D6 dice tracking the structure points
2. Weapon cards, for the corresponding weight class of the Rig
3. Equipment card(s)
4. Ironclad card

WEAPONS

Rigs have several options of weapons it can equip. Each Rig has 2 weapon slots, with the exception of the Colossal class which has an additional "hull" weapon slot. Each Rig must equip at least 2 weapons. Here's a breakdown of what each term in a weapon's profile means:

Rate of Fire (ROF): The number of dice rolled when attacking with this weapon. Each dice represents a single shot or strike the weapon makes in a single attack action.

Strength (STR): Represents the power of each individual hit.

Range (RNG): Defined in inches, this indicates the effective ranges of the weapon. A weapon may have a range profile X/Y, where X is the short range (SR) and Y the long range (LR). A weapon may have an accuracy modifier based on the weapon's effective range. For example, a weapon with a range of 8/16 and LR +1 has a +1 ACC bonus to weapons fired in the long effective range up to 8"-16".

Accuracy (ACC): A positive ACC modifier reduces the to-hit number required (making an attack easier); a negative ACC modifier increases it (making an attack harder). For example, a Rig with an AIM of 4+ firing with -1 ACC must roll 5 or higher to hit, while the same Rig with +1 ACC hits on a 3 or higher.

Perks: Some weapons have special abilities or characteristics that can affect the outcome of an attack, noted on the bottom of the card.

EQUIPMENT

A Rig's efficiency is not determined solely by its weapons. Equipment adds a layer of versatility, catering to the strategic needs of their Ironclad.

Equipment have an associated Iron cost, and sometimes a Heat cost, which generates an amount of heat when activated as an action.

Unique benefits, enhancements, or abilities the equipment provides to the Rig during operation are listed on the card.

A full list of equipment can be found in the *Rig Operating Manual* section.

Psychomystile
© Scoutsifer Studio. All Rights Reserved

ENGINE AND HEAT

Rigs are powerful machines that require massive engines to operate. Each Rig's unique Engine dictates how it can handle and respond to heat.

Each engine has a unique Heat Threshold, which determines how capable the engine is while running hot. The various actions and weapons each have a Heat value, indicating how much heat is generated when activating that action - represented by sliding the Heat value up the heat track on the Rig Control Terminal.

Engine heat starts on the first space on the Heat Track.

Heat Threshold:

In the Maintenance Phase, consult the status of the Engine. If the Engine Heat location is on a numbered space (+0 to +8) known as the Heat Threshold, roll on the Heat Threshold table below by rolling a D12 and adding the numbered modifier on the location of the heat track.

A Rig may function at maximum heat, but it can be dangerous! For any actions made when the heat tracker is at its maximum, make a Heat Threshold roll for each action.

Using all 5 actions is rarely optimal. Managing heat is more important than action efficiency.

Engine Heat Track with Heat Tracker token. The Engine Exhaust value shows how much heat is reduced each turn in the Maintenance Phase.

Result	Description	Effect
1-5	Nothing Happens	The engine performs as intended.
6-7	System Stall	Suffer 2 damage to the Hull. The Rig is *Stalled.*
8-9	Hydraulic Blowout	Suffer 2 damage to the Legs. The Rig is *Slowed.*
10-11	Ammunition Detonation	Suffer 2 damage to the Arms. The Rig is *Shocked.*
12-13	Fuel Line Rupture	Roll for an impact location. That component becomes *Ruptured.*
14-15	Structural Buckling	Each component suffers 1 damage (Hull, Engine, Arms, Legs).
16-17	Emergency Shutdown	The Rig powers down automatically. It cools to safe levels, reduce the heat to the start of the Heat Track, but must skip its next activation.
18	Chain Reaction	Each component suffers 1 damage (Hull, Engine, Arms, Legs) *Roll again!*
19	Engine Failure	The Engine's structure points are reduced to 0 and suffers *Catastrophic Damage.* If it is already *Catastrophically Damaged,* it becomes Disabled.
20+	Catastrophic Failure	The Rig suffers *Catastrophic Damage* to all components. Heat can no longer be decreased.

Heat Threshold Table

PLAYING THE GAME

The game is structured into a series of rounds, each representing a specific duration of combat and manoeuvring between Rigs on the battlefield. Each round is divided into phases.

Phases of a Round:

Initiative Phase: Determine which player activates first. Roll a D12, the player with the highest roll activates first. In the event of a tie, re-roll. Roll for initiative at the start of each round.

Players have +1 to their initiative roll for each Light Rig in their Squadron still on the battlefield.

Activation Phase: Players take turns activating a single Rig sequentially based on the initiative order for up to 5 actions each. Each Rig completes its actions before moving on to the next activated Rig. If a player does not have any Rigs left to activate, the player with more Rigs continues to activate the rest of their Rigs until the end of the round.

Maintenance Phase: Handle any end-of-round effects, maintenance and engine heat management.

Round Duration: A round ends once all players have activated all their Rigs and resolved any end-of-round events or effects.

Reset and Repeat: Once a round is concluded, the game resets to the Initiative Phase of the next round unless victory conditions are met.

An Ironclad must be considerate when managing the heat generated by their Rig – or push it to its limits when the battle demands. It's not always wise to use up all of the available actions a Rig may take!

ACTIVATION, ENGINES AND ACTION POINTS

Actions:

Each Rig may take **up to 5 actions** when activated. Actions may generate heat, denoted in square brackets [X], which increases its engine heat by moving the heat tracker on the Rig Control Terminal. When making an action, heat is generated first, then the action is performed.

Action	Heat
Move	1
Fire Weapon	1
Melee Attack	1
Called Shot	1
Ram	1
Reload	1
Repair	1
Shut Down	0
Prepare	1
Use Equipment	X

Rig actions summary

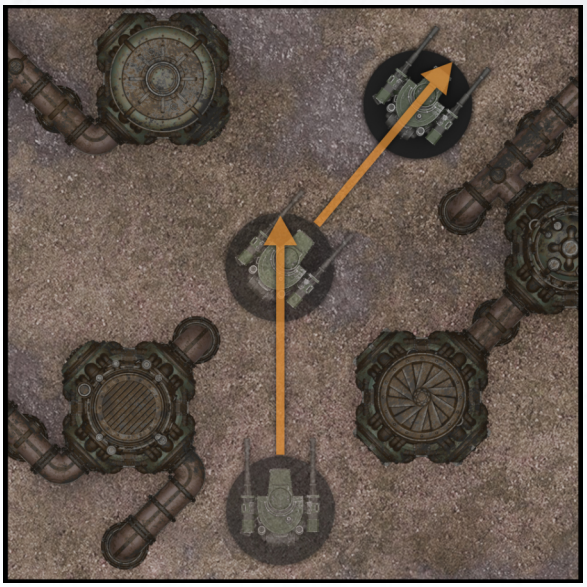
Move [1] - When a Rig moves, it may move up to its Speed value in inches, incorporating different types of movement.

Forward Movement: A Rig may move directly forward up to its full Speed value.

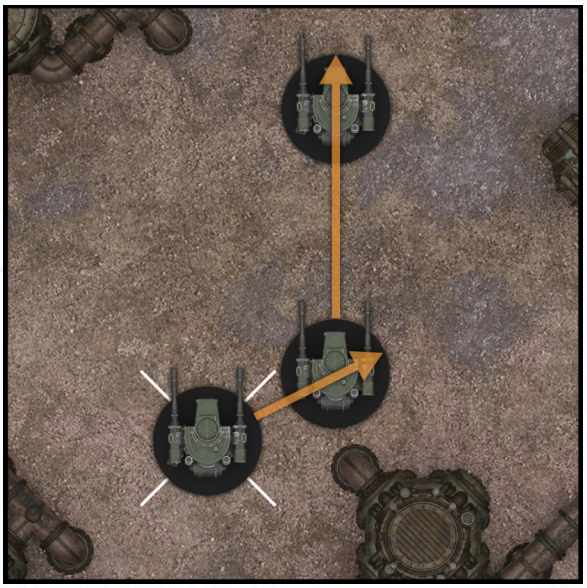
Backpedal: Rigs can reverse directly backward, consuming 2" of available movement for every 1" moved.

Side-Stepping: Rigs can move in their front or side arc in directions other than straight forward without changing their facing, consuming 2" of available movement for each 1" moved.

Pivot: A Rig may pivot up to 90 degrees in a single move action, at the *start or end* of its movement.



A Scraphound medium Rig takes a move action. It has a speed value of 4. In a single move action, it moves forward 4 inches then pivots up to 90 degrees at the end of its movement. It uses a second move action to move forward another 4 inches.



In this example, the Scraphound takes two movement actions. For its first action, it side-steps in its right side arc. It has a Speed value of 4, but it can only move 2 inches, because when sidestepping, each 1" of movement consumes 2" of available movement.

For its' second action, it moves directly forward 4 inches, up to its' full speed value.

Fire Weapon [1] – Choose an equipped ranged weapon and make an attack based on its profile. Weapons must be re-loaded after every Fire Weapon action if used again in the same activation. If a Rig chooses "Fire Weapon", for the same weapon during the same activation, it must be *Reloaded* first. All weapons are reloaded at the end of the Rig's activation.

Melee Attack [1] - Choose an equipped melee weapon and make an attack based on its profile. Melee weapons do not need to be reloaded.

Called Shot [1] - Make a Fire Weapon action, choosing the Hit Location instead of rolling on the Hit Location table, with -2 ACC. The Engine cannot be the target of a Called Shot when firing into the front arc of an enemy Rig. The target Rig must be within line of sight.

Ram [1] – A Rig can ram itself into an enemy. This action can only be used after a movement of at least 2", moving within 1" of an enemy Rig. When a Rig rams another, both Rigs' hulls crash together: each Rig's hull suffers a single hit with a Strength of D6 + a modifier based on the ramming Rig's weight class (see table). For each hit, create a damage pool equal to its Strength and make an armour roll against it as normal. The target Rig is then pushed directly back a distance based on the ramming Rig's weight class.

Weight Class	Hit STR	Push Back
Light	D6 + 1	2"
Medium	D6 + 2	2"
Heavy	D6 + 3	3"
Colossal	D6 + 4	3"

Reload [1] – Ranged weapons require reloading in-between firing during the same activation. The Reload action reloads all weapons. Weapons are automatically reloaded at the end of the Rig's activation without generating heat.

Repair [1] – An Ironclad may attempt minor repairs during the heat of battle. The repair action can either *remove a Condition* from the Rig OR *repair Structure Points* to one component, but not both. Roll a D3 and repair that many structure points to one component. Catastrophically Damaged or Disabled components cannot be repaired.

Shut Down [0] - When activating a Rig, before any other actions, you may choose to forfeit all actions to set the Engine Heat to 0.

Use Equipment [X]: Some Equipment must use an action to be used, and some Equipment generate Heat when used. Consult the specific Equipment specifications.

Preparations:

Prepare [1] - Preparations represent an Ironclad's ability to anticipate enemy actions and prepare to respond dynamically during the opponent's turn. By spending an action and generating 1 Heat, a Rig can "Prepare" a specific reaction to be triggered by an enemy's actions (usually when being the target of an attack). This state lasts until the Rig's next activation, at which point the token is removed.

To activate a Preparation, declare you are making a Prepare Action, and place the relevant Preparation token face down next to the chosen Rig. When the corresponding enemy action triggers the Preparation, reveal it to the opponent and activate its effects. No additional heat is generated if the Preparation is triggered.

Only one Preparation can be made per activation.

Prepare Evasive Manoeuvre

When targeted by an attack on an opponent's activation, before the attack is made, move up to half of the Rig's Speed value in any direction. If the Rig is out of range or line of sight, the attack fails.

Prepare Return Fire

When targeted by an attack on an opponent's activation, after the attack is made, choose 1 weapon to make an attack at the enemy Rig.

Prepare Brace for Incoming Fire

When targeted by an attack into the front or side arc on an opponent's activation, Armour rolls have +2 to the result for that attack.

ATTACKING AND DAMAGE

1. Declare the Attacker and Target:

Begin by announcing which of your Rigs is attacking and specify its target, it must be within the Rig's front 90 degree arc.

2. Check Range:

Using a ruler or measuring tape, measure the distance between the bases of the attacking Rig and the target. Ensure the distance is within the effective range of the chosen weapon. If not, the attack fails.

3. Verify Line of Sight:

The attacking Rig must have a clear line of sight to its target, even if the target is partially obscured by cover. Line of Sight is covered in detail on page 18.

Light Cover: If a Rig is in light cover, the attack has a modifier of -1 ACC.

Heavy Cover: If a Rig is in heavy cover, the attack has a modifier of -2 ACC.

4. Roll to Hit:

Roll as many D6 as the Rate of Fire (ROF) value of the weapon. To see if the hit is successful, add or subtract any relevant ACC modifiers and see if the roll is equal to or above the firing Ironclad's AIM value.

If any enemy Rig has a face-down Prepare token, remain alert, reactions may trigger here!

5. Apply Weapon Effects:

Some weapons have special effects when they hit or under certain conditions. Check the weapon's "Perks" description and apply them accordingly. Perks are listed on page 46.

Critical Hit: some weapon perks have bonuses that trigger on a Critical Hit. A Critical Hit is triggered when rolling a 6 to hit.

6. Determine Impact Location:

The controller of the targeted Rig rolls a D12 to determine the impact location:

Roll	Impact Location
1-4	Hull
5-7	Arms
8-10	Legs
11-12	Engine

Called Shot: A Rig firing its weapons may try to target a specific location on an enemy Rig by declaring the attack as a Called Shot. A Called Shot that successfully hits does not need to roll on the Impact Location table. A Called Shot has -2 ACC.

The Engine cannot be targeted this way when firing into a Rig's front arc.

7. Calculate Damage

Step 1 - Damage Pool

Damage is calculated as the total applied force of an attack, used to determine whether it overcomes a Rig's armour.

After determining the hit location, create a damage pool, which is the total strength of the attack. Add together:

+ Total strength from each successful hit

+ 2 if attacking the side arc

+ 4 if attacking the rear arc

+ Perk effects

Step 2 - Armour Roll

The defending player rolls a number of D6 equal to the damage pool.

Before making an armour roll, apply any modifiers. Then for each die that rolls equal to or above the armour value of the targeted component:

- Negate 1 damage

Step 3 - Apply Damage

Consult the Rig's Control Terminal, and reduce the component's Structure Points by the total amount of damage.

Summary:

Damage dealt = damage pool – successful armour rolls

CATASTROPHIC DAMAGE

If any component's Structure Points are reduced to 0, that component becomes *Catastrophically Damaged*. Any further damage *Disables* it.

- In the same attack action that reduces it to 0, a component cannot be Disabled.
- If a Catastrophically Damaged component takes any further damage in a later action, it becomes Disabled.

Catastrophically Damaged and *Disabled* components cannot be *Repaired* (except between battles in a Campaign - see the Aftermath Phase in the Campaign).

If **any 2** of a Rig's components are *Disabled*, the Rig is *Destroyed*!

Damage Overflow

If an attack hits a Rig component with 0 Structure Points and that component is already Disabled, the defending Rig's controller chooses another location on the Rig that is not disabled to received that damage.

When a Rig component's Structure Points are reduced to 0, apply the corresponding Catastrophic Damage effects.

Hull Catastrophic Damage:

- Due to internal system malfunctions the Rig becomes permanently S*talled.*
- [Colossal Rigs]: weapons with the "Hull" perk are disabled and cannot be used.
- When additional damage is taken, the Hull is *Disabled*. The Rig becomes permanently *Stalled* and *Shocked.*

Legs Catastrophic Damage:

- The Rig becomes *Slowed*.
- When additional damage is taken, the Legs are *Disabled*. The Rig is permanently *Immobilised*. It can still pivot.

Arms Catastrophic Damage:

- Roll a D12 and consult the following table. That weapon can no longer be used to make an attack action.
- When additional damage is taken, the arms are *Disabled.* Both weapons can no longer be used to make an attack action.

1-6	Left Weapon
7-12	Right Weapon

Engine Catastrophic Damage:

- If the Engine's Heat is below the Heat Threshold, move it up to the Heat Threshold. Heat can no longer be reduced under the Heat Threshold.
- When additional damage is taken, the engine is *Disabled*. Heat cannot be reduced or Exhausted.

RIG DESTRUCTION

Upon destruction, there's a chance the Rig's fuel source might erupt. If a Rig's *Engine* was destroyed, the Rig automatically explodes. Otherwise, roll a D12; on a 6+ the Rig explodes. Effects occur based on the Rig's Weight Class.

The destroyed Rig's controlling player rolls for damage, and any affected Rig's controller rolls for Impact Location. Players make an Armour Roll for each point of damage in the damage pool as normal. Rig arc facing damage bonuses apply.

Light Rig: All Rigs within a 3" radius suffer a STR 2 + D6 hit.

Medium Rig: All Rigs within a 4" radius suffer a STR 4 + D6 hit.

Heavy Rig: All Rigs within a 5" radius suffer a STR 6 + D6 hit.

Colossal Rig: All Rigs within a 6" radius suffer a STR 8 + D6 hit.

MAINTENANCE PHASE

After all Rigs have been activated, the maintenance phase starts.

1. Each Rig that has their heat tracker on or above the Heat Threshold rolls on the Heat Threshold table (page 26). Make these rolls in order of which Rig is running hottest (has the highest Heat). If 2 Rigs have the same Heat, the player with the initiative rolls first.

2. All Rigs have their Heat decrease by their Engine Exhaust value, unless otherwise stated (for example, engine malfunctions).

3. Resolve any other effects which trigger in the Maintenance Phase.

4. Check objective scoring for certain engagements.

If the Heat Threshold rolls a result that can't be applied (targets a location that is already disabled or has the status already), re-roll for a new result.

PHASE SUMMARY

Initiative Phase: Players roll for initiative to determine who activates first.

Activation Phase: Players take turns activating Rigs until all Rigs are activated.

Maintenance Phase: Rigs roll on the Heat Threshold table if necessary, then reduce heat by their Engine Exhaust value.

CONDITIONS

Rigs operating in the Smoglands are constantly pushed beyond safe limits. System strain can inflict *conditions* that hinder performance and disrupt combat effectiveness.

Unless stated otherwise, *conditions* apply during the Rig's next activation and then expire once their activation is over.

Stalled

The Rig's engine falters, starving it of power at a critical moment.

The Rig has -2 Actions during its next activation.

Shocked

Electrical surges and system interference disrupt targeting and movement.

The Rig has -1 ACC and -1 SPD (to a minimum of 1) during its next activation.

Slowed

Damaged locomotive components hampers the Rig's mobility.

The Rig has -2 SPD (to a minimum of 1) during its next activation.

Immobilised

The Rig's movement systems are locked in place.

The Rig cannot Move, but may still Pivot as normal.

Ruptured

Violent structural breaches, leaking fluids or fired cause damage to a component over time until Repaired. When a component is Ruptured, it suffers 2 damage to the Rig's component during each Maintenance Phase.

This condition does not expire unless Repaired.

Psychomystile
© Scoutsifer Studio. All Rights Reserved

Catastrophically Damaged

The Rig's component has suffered critical structural failure, pushing it to the brink of destruction.

Cannot be Repaired or restored

May suffer additional effects as defined by the affected component.

This condition does not expire.

Disabled

The component has suffered further damage after becoming Catastrophically Damaged.

Cannot be Repaired or restored (except between battles in a Campaign).

Cannot be targeted or affected further unless stated otherwise.

May suffer additional effects as defined by the affected component.

When 2 of a Rig's components are Disabled, the Rig is Destroyed.

This condition does not expire.

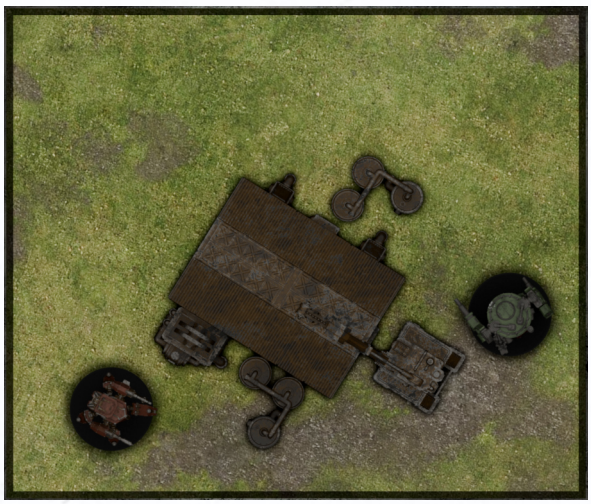
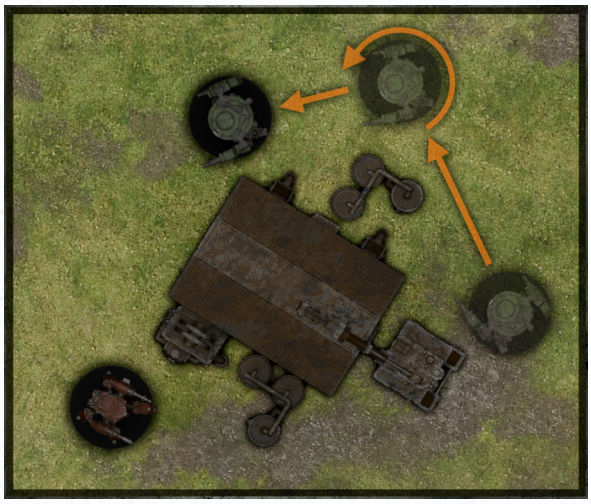
EXAMPLE TURN

In this turn example, a Freegear Coalition "Hijack" light Rig moves to flank the opposing Krim Corporation "Stalker" light Rig.



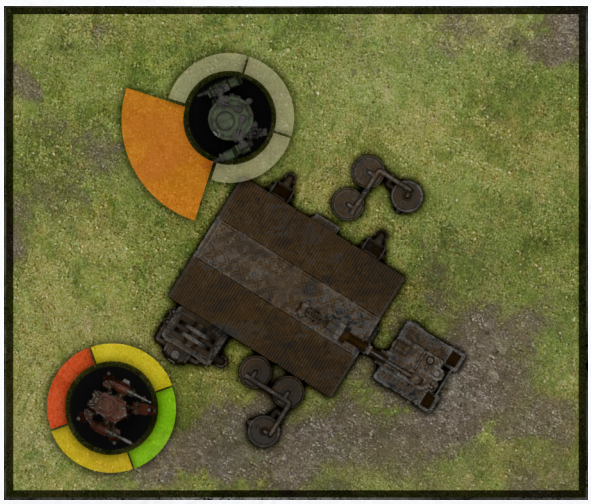
Activation starts

The Hijack Ironclad knows that if they can get a hit into the rear of the Stalker, they can hit an exposed spot and deal more damage! The Hijack has to carefully plan its turn consisting of 5 actions, ensuring it does not overheat its engine.



Actions 1 and 2: Move into position

The Hijack, being a light Rig, has a SPD value of 4". It moves forward 4" and at the end of its movement, it pivots 90 degrees. For its second action, it moves again, forward 2".



The Hijack checks its firing arc, and determines the Stalker is in line of sight. However, the building is obscuring the Stalker partially - the Stalker is in *light cover*. The Hijack will have -1 ACC on its hit rolls.

The Hijack's Ironclad is a Veteran, which has an Aim of 4+, so normally has to get a 4 or above to hit. Because of the obstruction, the Hijack now has to get a 5 or above to hit.

Luckily, the Stalker's side arc is exposed, so if the Hijack hits, it will deal +2 damage!

Psychomystile
© Scoutsifer Studio. All Rights Reserved

Action 3: Attack roll

The Hijack is equipped with a Mech Rifle and an Igniter.

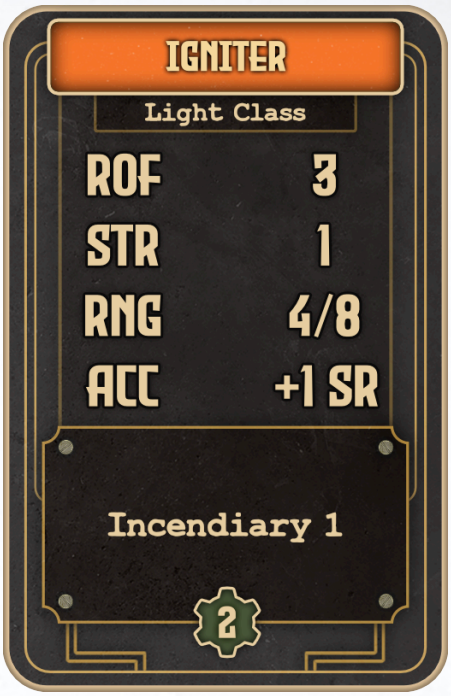
After declaring that it will fire its Igniter, they check the range between the bases of the two Rigs. It's just under 4". Checking the Light Igniter weapon, there is a +1 ACC bonus for firing at a Rig within 4" (+1 SR).

Before firing, the Ironclad checks their Aim of 4+ and ACC modifiers: -1 for the target being in *light cover*, and +1 for being within 4" of the target. The Hijack needs 4s to hit.

The Igniter has a total ROF of 3, so for the attack, 3 D6 are rolled, resulting in a 5 and a 6. It gets 2 hits, and one of them is a crit!

Next, the Hijack calculates the damage pool. It adds up the STR of each hit. The Igniter has a STR of 1, and with 2 hits, 2 damage are added to the damage pool.

The Hijack is also firing into the *side arc* of the Stalker. For firing into the side arc, the attack gains +2 damage, for a total of 4 damage added to the damage pool.



Action 3: Impact location roll

Since the Stalker was hit, and the Hijack's Ironclad chose *not* to make an "Called Shot" action, the Stalker's Ironclad rolls to determine the Impact Location of the attack. They roll a D12, resulting in a 4 - the hull was hit.

Action 3: Armour roll

The Stalker's hull has an armour value of 4+. It rolls 4 D6, one D6 for each damage in the damage pool.

The Stalker rolls a 2, 3, 5 and a 6 - blocking two points of damage, while also suffering two point of damage.

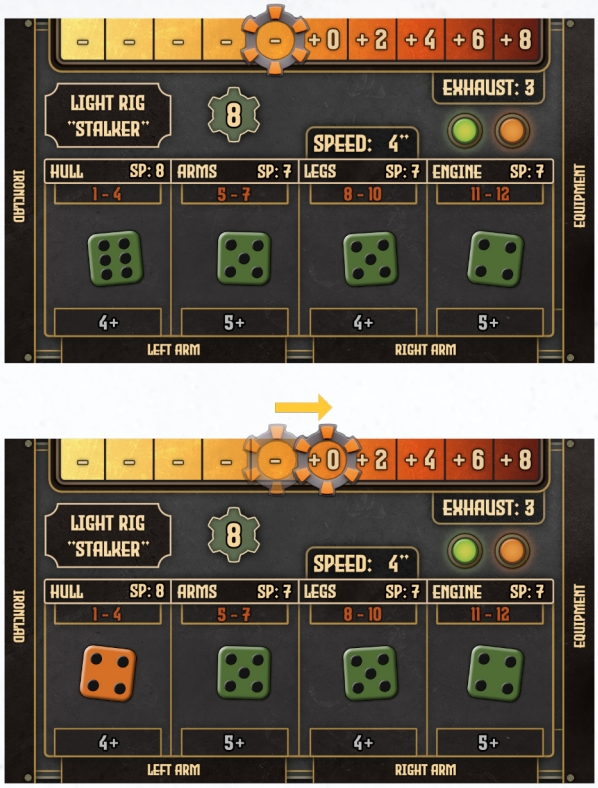
Psychomystic
© Scoutsifer Studio. All Rights Reserved

Action 3: Perk effects and damage

Because the Igniter has the “Incendiary” perk, and the Hijack rolled a 6, it activated the perk’s critical hit effect. Incendiary weapons increase the target’s engine heat by 1 for each critical hit rolled. The Stalker’s engine heat is increased by 1 for this attack!

The Hijack’s attack was successful, dealing 2 damage to the Stalker’s hull, and increasing its engine heat by 1.

Using the card assets for the Rig Control Terminal, the dice tracker on the hull is reduced from 6 to 4 for the 2 damage dealt. The heat tracker is moved up 1 space.



Action 4: Prepare Evasive Manoeuvres

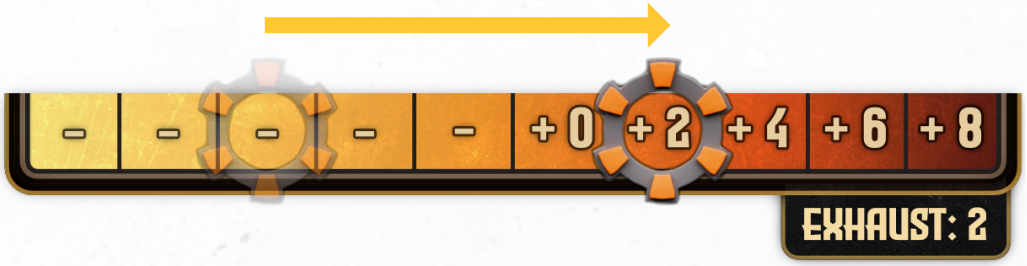
Although the Hijack made a successful attack on the Stalker, the Hijack’s Ironclad decides to end its activation - as its engine is getting hot and decides to play cautiously, not pushing its luck - but not before preparing evasive manoeuvres!

As its fourth action, the Hijack Prepares for Evasive Manoeuvres, generating 1 heat, by secretly placing the relevant token, face-down, next to the model on the battlefield. Now the Hijack is ready to take cover if the Stalker decides to turn to face the Hijack and fire on its next turn!

Psychomystile
© Scoutsifer Studio. All Rights Reserved

With its two moves, fire weapon and prepare actions, the Engine Heat increased by 1 for each action.

The Hijack already started its activation with the Engine Heat on the third space from a previous turn. During its activation, it moved the tracker up 4 spaces, ending the activation in a numbered space, +2. Since the engine heat is above the heat threshold, it must roll on the Heat Threshold table in the Maintenance Phase.



Maintenance Phase:

The Hijack rolls a D12 - an 8 is rolled. It adds the +2 modifier from the heat track, resulting in a 10.

Consulting the Heat Threshold table, the Hijack suffers *Ammunition Detonation*. It suffers 2 damage to its arms, and suffers from the condition *shocked*. It takes the *shocked* token and places it next to the model. The Hijack will have -1 ACC and -1 SPD for its next activation.

At the end of the maintenance phase, the engine is cooled down by its Engine Exhaust value of 2, reducing Engine Heat by 2.

RIG OPERATING MANUAL

FIELD ISSUE DOCUMENT

AUTHORISED OPERATIONAL REVISION

Compiled from front-line combat reports, foundry archives, maintenance logs, and surviving Ironclad records throughout the Smoglands.

Contains recognised Rig chassis profiles, approved weapons systems, operational classifications, and battlefield revisions currently authorised for active deployment.

Unauthorised reproduction punishable under corporate wartime statutes.

© Scoutsifer Studio. All Rights Reserved

The information contained within has been compiled from foundry records, field maintenance reports, Ironclad combat logs, and front-line operational assessments. Due to the conditions of modern warfare, individual machines may differ from factory-issued specifications as a result of salvage repairs, field modifications, component shortages, or unauthorised alterations.

Operators are reminded that no Rig remains factory-standard for long.

Extended deployments, poor fuel quality, environmental contamination, and sustained combat stress place considerable strain upon all locomotive, structural, and engine systems. Frequent maintenance inspections are mandatory wherever operationally possible. Crews are advised to monitor heat accumulation carefully during combat operations, particularly in confined terrain or during prolonged engagements.

The battlefields of the Smoglands are harsh on both Rig and Ironclad.

Mud, ash, corrosive rainfall, industrial debris, and freezing conditions regularly interfere with targeting systems, joint assemblies, and engine performance. In many regions, recovery of disabled Rigs is considered impractical due to artillery activity, terrain collapse, or fuel expenditure. Crews unable to maintain mobility are unlikely to survive prolonged enemy contact.

Despite this, the Rig remains the most effective armoured weapons platform yet developed since the collapse of the old nations.

Whether employed in trench assaults, refinery sieges, convoy interceptions, or urban suppression operations, the presence of a Rig formation continues to define the outcome of modern engagements across the Smoglands.

This document remains subject to ongoing revision as new chassis patterns, weapon systems, and battlefield adaptations emerge.

Operators are advised to ensure they are referencing the latest authorised edition prior to deployment.

RIG CLASSIFICATIONS

Modern warfare within the Smoglands relies heavily upon the deployment of mechanised combat platforms capable of traversing terrain inaccessible to conventional armoured vehicles, with capabilities of protecting its Ironclad from environmental hazards. While individual designs vary considerably between corporations, foundries, and field workshops, most recognised Rig chassis fall within established operational classifications.

These classifications are determined primarily by structural mass, armour distribution, engine output, and intended battlefield role.

It should be noted that field modifications, salvage reconstruction, and regional production shortages frequently result in deviations from standard specifications. Weight classifications should therefore be treated as operational guidelines rather than exact measurements.

LIGHT RIGS

Light Rigs are designed for reconnaissance, flanking operations, rapid assaults, and industrial patrol duties. Their lighter frames allow for greater mobility across unstable terrain including trench networks, refinery scaffolds, collapsed urban districts and the like.

While lightly armoured compared to larger chassis, Light Rigs remain dangerous when deployed aggressively or in coordinated formations. Many corporations utilise Light platforms for scouting, convoy interception, or harassment operations against exposed enemy supply lines.

Light Rigs typically require less fuel, fewer replacement parts, and reduced logistical support compared to heavier platforms.

MEDIUM RIGS

Medium Rigs represent the most commonly deployed battlefield classification throughout the Smoglands. Designed to balance mobility, protection, and firepower, these machines are capable of operating across a wide range of combat environments without requiring the extensive logistical support demanded by heavier chassis.

Most sustained engagements are fought and decided by Medium Rig formations.

Due to their versatility, Medium platforms are frequently modified for specialised duties including trench assault, urban suppression, escort operations, and defensive line holding.

© Scoutsifer Studio. All Rights Reserved

HEAVY RIGS

Heavy Rigs are breakthrough and siege platforms designed to withstand prolonged combat under concentrated enemy fire. Their thick armour plating and oversized weapon systems make them particularly effective during fortified assaults, industrial sieges, and static front-line engagements.

The deployment of Heavy Rigs places significant strain upon supply chains. Fuel consumption, ammunition requirements, and mechanical wear increase substantially during sustained operations. Recovery of disabled Heavy platforms is often considered impractical under active artillery conditions.

Despite these limitations, Heavy Rigs remain among the most feared battlefield assets in active service.

COLOSSAL RIGS

Colossal Rigs are rare, super-heavy war platforms reserved for major offensives, refinery defence operations, and corporate siege deployments. These machines represent the largest mechanised chassis currently fielded within the Smoglands and require immense industrial infrastructure to construct, maintain, and transport.

Unlike smaller Rig classifications, Colossal platforms are rarely intended for rapid manoeuvre warfare. Most are designed around oversized long-range weapon systems capable of delivering bombardments across entire combat sectors. Siege mortars, heavy artillery batteries, and extreme-calibre cannons are commonly mounted upon the hulls of these chassis, allowing Colossals to function as mobile artillery fortresses capable of reshaping front lines from miles away.

The appearance of a Colossal Rig on the battlefield is often sufficient to alter front-line morale and force immediate strategic redeployment by enemy commanders.

FIELD IDENTIFICATION

Rig crews are advised to identify enemy chassis by silhouette, engine exhaust signature, and weapon configuration whenever possible. Dust storms, smoke saturation, industrial fog, and artillery ash frequently obscure visual confirmation at long range.

Misidentification of hostile Rig classifications remains a leading cause of failed engagements during low-visibility operations across the Smoglands.

When identification cannot be confirmed, operators are advised to assume hostile contact is heavier than initially reported.

IRONCLADS

In the Smoglands, a Rig is only as deadly as the one who commands it.

Ironclads are the pilots, veterans, and conscripts who bind machine to will. Their skill determines how effectively a Rig can bring its weapons to bear in the chaos of battle.

Choosing an Ironclad

Each Rig must be assigned a single Ironclad.

An Ironclad provides the Rig's *Aim* value, determining the result required to successfully land hits when making attacks. A more skilled Ironclad will land hits more reliably, increasing the effectiveness of all weapons equipped to the Rig.

Ironclads also have an Iron cost, which contributes toward the Rig's total loadout.

Commanders must decide where to place their trust: in the machine, or in the pilot.

Ironclad	ACC	IRON
Rookie	6+	0
Experienced	5+	1
Veteran	4+	3
Elite	3+	5

WEAPON PERKS

The various weapons available to Rigs may have perks attached to them, changing how they perform on the battlefield.

Armour Piercing X
Increases the target Rig's armour roll target number by X.

Bombardment
Attacks made with this weapon's long range (LR) do not require line of sight and ignores cover. When attacking without line of sight, the attack has -1 ACC. Attacks made this way cannot use the "Called Shot" action.

Breaching
For each Critical Hit, apply 1 damage to the affected area with no Armour Roll in addition to its normal damage.

Cold
Cold weapons do not generate Heat when fired.

Flanking
Each successful hit adds 1 additional damage to the damage pool when firing into a Rig's side or rear arc.

Explosive X
All units within X" of the target's base suffer Hits equal to this attack's Hits. Secondary targets take half damage (rounded up), plus side or rear facing effects.

Hot
Attacks made with "Hot" weapons roll a D12 after the attack is made. On a 6+, increase engine heat by 1, on a 11+, increase engine heat by 2.

Hull
Colossal Rigs each have the option of equipping weapons on or within their Hull. Weapons with the Hull trait may only be equipped once on each Colossal Rig.

Impale
If an attack from this weapon is a Critical Hit, apply the Immobilised condition on the affected Rig.

Incendiary
For each critical hit by this weapon, increase the target's Engine Heat by 1.

Melee
Melee weapons do not need to be reloaded. When two melee weapons are equipped, each weapon has +1 ROF.

Penetrating
Hits of 5+ count as Critical Hits.

Precision
Called Shots made with this weapon do not suffer the -2 ACC penalty.

Rupture
If an attack from this weapon is a Critical Hit, apply the Ruptured condition on the target component of the target Rig.

Shock
If an attack from this weapon is a Critical Hit, apply the Shocked condition on the affected Rig.

Staggering
If this attack hits, Roll a D6. On a 1-2, the target pivots 90° left. On a 3-4, the target is pushed back 2". On a 5-6, the target pivots 90° right.

Sustained Fire
For each Critical Hit rolled, add 1 additional damage to the damage pool.

Volatile
If this Rig makes an attack while at or above its Heat Threshold, each hit adds +1 damage to the damage pool.

RIGS OF THE CORPORATIONS

Rig platforms operating throughout the Smoglands are manufactured according to the industrial doctrines and battlefield requirements of their respective Corporations. While all recognised chassis fulfil similar operational roles, significant variation exists in armour distribution, locomotive design, engine performance, weapons integration, and battlefield philosophy.

Despite ongoing corporate rivalries, much of modern Rig development continues to rely upon shared industrial standards established during the early mechanised conflicts of the Smoglands. Numerous weapon systems have since become widely adopted due to their reliability, ease of manufacture, and battlefield effectiveness. These standardised armaments can now be found mounted across multiple recognised chassis patterns regardless of corporate origin.

Contained within this manual are the currently recognised operational profiles of active Rig platforms, approved weapons systems, auxiliary equipment, and the classifications of Ironclads authorised to operate them.

THE KRIM CORPORATION

THE KRIM CORPORATION is the embodiment of order in the Smoglands, an empire of discipline, hierarchy, and exploitation. Once a vast consortium of rail lines, armouries, and industrial networks, Krim centered it self with a reputation for precision and control. When the Smogfall plunged the world into chaos, The Krim thrived by tightening its grip. Food, air, and fuel were rationed with military efficiency, and the corporation transformed overnight from a logistical powerhouse into a militarised state.

Industry under The Krim is as structured as a battlefield. Factories run like barracks, their schedules enforced with military severity, every cog in the machine expected to pull its weight. Their strength lies in standardisation: weapons and Rigs are built to consistent patterns, easy to repair, replace, and redeploy. Unlike Nox's reckless overproduction, The Krim wastes nothing. Their philosophy is simple, order outlasts chaos, and efficiency will always triumph over excess.

Life inside Krim's walls reflects this grim logic. Citizens are not individuals but labourers and soldiers, expected to serve until their usefulness is spent. Foot soldiers form the lowest tier of society, treated as expendable bodies sent into the wastes where survival is unlikely. Above them, administrators and overseers maintain the rigid order of the state.

At the pinnacle are the Ironclads: Rig pilots forged through years of discipline and loyalty. Most Ironclads rise from the ranks of obedient soldiers, but the largest and most prestigious machines are reserved for Krim's aristocratic bloodlines. To these elite families, piloting a Rig is not just service, it is inheritance, proof of their natural right to command.

On the battlefield, Krim fights like the machine it has become. Armies march in lockstep, supply lines are maintained with relentless precision, and victory is achieved not through spectacle but through endurance. They wage wars of attrition, confident that their structure will outlive their enemies' chaos.

The Krim's Rigs embody this philosophy. They are standardised and uniform, built for durability and reliability above all else. Their weapons are dependable - autocannons, artillery, and heavy machine guns designed to fire in any conditions and wreak havoc. The Krim Corporation's Rigs advance with cold inevitability, each one a cog in the endless march of the corporate war machine.

Relations with other factions are practical but strained. Nox Industries is their most dangerous ally, a partner in conquest when convenient, but an inevitable rival when the

spoils must be divided, and tensions between them are often high. Arcus Technologies is often a prised target, their coveted arc-tech frequently stolen and installed onto Krim Rig chassis. Triton Engineering, with its clinging to tradition and isolationism, is seen as wasting precious resources that could fuel Krim's war machine. The Freegear, meanwhile, are despised above all else. Their rebellion against order is intolerable, and Krim crushes their enclaves with ruthless efficiency, turning each campaign into a lesson in obedience for the rest of the Smoglands.

The Smoglands are to be mastered, shaped into order through iron will and endless discipline. To falter is to fail, and failure has no place in The Krim's design.

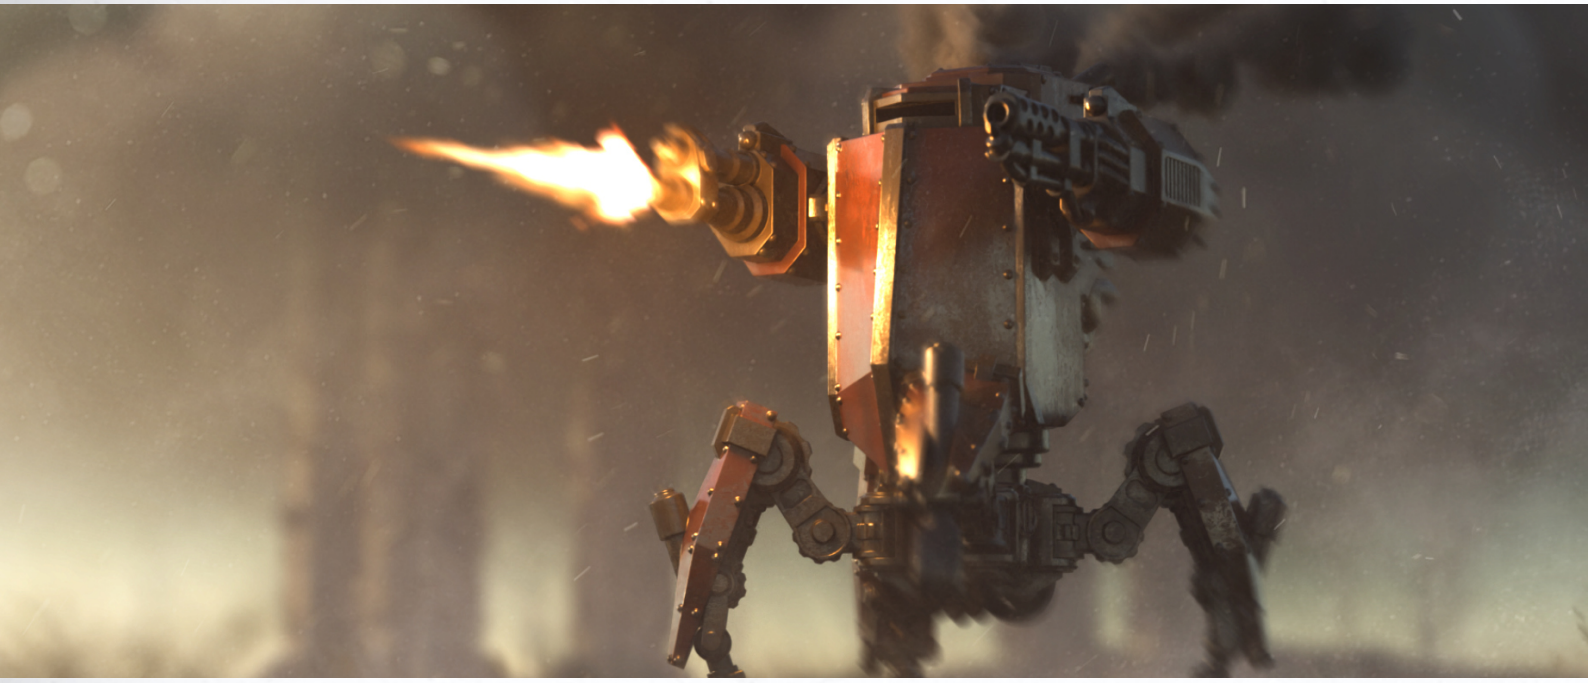
STALKER
LIGHT RIG



Originally developed as an inexpensive security and patrol platform, the Stalker quickly became one of the most widely manufactured Krim Rig chassis. Its compact quadrupedal frame allowed it to navigate narrow industrial streets and crowded worker zones far more effectively than larger platforms, making it a common sight in occupied cities and labour sectors throughout Krim territory. Cheap to produce and simple to maintain, Stalkers were often deployed in large numbers both for internal security to control Krim society and to support front-line formations with reconnaissance and rapid assault duties. Among civilians living beneath Krim authority, the silhouette of a Stalker moving through smoke-filled streets became synonymous with surveillance, intimidation, and the ever-present reach of the Corporation.

RAVAGER
MEDIUM RIG

The Ravager was introduced to bridge the widening gap between fast reconnaissance platforms and increasingly expensive Heavy Rig programs, designed as a cheap and versatile front-line assault machine capable of sustained combat across a wide range of battlefield conditions. Built around a durable industrial frame and adaptable weapons systems, the chassis quickly became the backbone of many Krim armoured divisions due to its balance of mobility, firepower, and relative ease of production. Ravagers are commonly deployed in coordinated assault formations where they support squadron offensives and defensive line engagements alike. Among Krim commanders, the Ravager earned a reputation as a dependable machine built not for prestige, but for the grinding wars of attrition.

DEFILER

HEAVY RIG

The Defiler was designed to do one thing above all else: break enemy lines through overwhelming force. Built around an overpowered industrial engine and a brutal weapons platform, early Defilers earned a reputation for turning prolonged engagements into massacres of relentless pounding firepower. Thick frontal armour and oversized weapon systems allowed the chassis to continue advancing through artillery fire that would cripple lighter platforms. Defilers were frequently deployed at the centre of major offensives where their role was simple: absorb punishment, close the distance, and reduce enemy fortifications through sheer sustained violence. Even now, decades after the first production runs left Krim foundries, the thunder of a Defiler advance remains one of the most feared sounds on the battlefields.

DOMINATOR

COLOSSAL RIG

The Dominator is a siege platform built to deliver overwhelming long-range firepower capable of reducing entire defensive sectors to rubble before ground forces advanced. Towering above conventional Rig formations, the Dominator functions less as a battlefield combatant and more as a walking artillery fortress, mounting immense bombardment weapons. Rare, enormously expensive, and logistically demanding to maintain, Dominators are deployed only during major offensives or strategic defence operations, where their presence alone is often enough to force enemy formations into retreat long before the first shells land.

NOX INDUSTRIES

NOX INDUSTRIES is the furnace of the Smoglands, a corporation forged in industrious expansion. Before the Smogfall, Nox was already infamous for pushing industry further than anyone else dared, drilling into unstable reserves and building foundries where others saw only ruin. When the skies collapsed, Nox did not waver, it seized the moment. Governments fell, competitors fractured, but Nox survived by imposing ruthless order, binding its citizens into the machinery of the state. In the age that followed, it became one of the most feared and unyielding powers of the Smoglands.

For Nox, industry is everything. Their cities are engines of endless production, where factories roar without pause and the line between human and machine blurs. Workers are not individuals but expendable parts of a greater whole, consumed and replaced as needed. Sacrifice is expected and progress is measured not in comfort or freedom but in output. To live under Nox is to accept that the corporation always comes before the individual, for the greater good of industry.

Nox is a totalitarian society where loyalty is manufactured as carefully as its Rigs. Citizens are indoctrinated from birth to believe obedience is survival and service is duty. Ambition still exists, but only within the boundaries set by the corporation. The weak are culled by labour, and the strong are rewarded with responsibility, always under the shadow of control.

Ironclads are selected through state conscription. Promising candidates are taken young, trained, and subjected to relentless indoctrination until they are unflinchingly loyal to the corporation. They are stripped of individuality, their will reshaped to embody Nox's ideals. An Ironclad of Nox is not a hero, but a machine with a human heart beating only for the corporation.

Their Rigs reflect this doctrine of control. They are hulking war machines, built not just for battle but as symbols of Nox's supremacy. Overbuilt and imposing, they are clad in thick armour and armed with brutal, unforgiving weaponry. Many draw from their industrial heritage; construction equipment reforged into weapons, always standardised to ensure ease of mass production.

Relations with other factions are marked by rivalry and opportunism. The Krim Corporation is their greatest competitor, together they are the twin titans of the Smoglands. Triton Engineering guards the last great oil reserves, and Nox covets their resources above all else. Skirmishes and battles between the two are constant, though Triton has at times reluctantly yielded

Psychomystile

resources in exchange for ceasefires or protection from the Krim Corporation. For Nox, such bargains are never permanent; their hunger for oil is endless. Arcus Technologies is a constant irritant, their raiders strike Nox factories and convoys for materials and arc-tech, and Nox answers each raid in kind, coveting Arcus's reactors even as it curses their interference. The Freegear Coalition, meanwhile, is seen as little more than an annoyance, scavengers and saboteurs who delay expansion. Nox sweeps them aside whenever they stand in the way, more annoyed than concerned.

Nox Industries is a furnace that consumes its people and its enemies alike, forging strength from obedience and industrial expansion. To serve Nox is to abandon the self, for the good of the corporation.

HAZARD
LIGHT RIG

The Hazard was designed to operate within the expanding construction sectors of early Nox settlements, where its reinforced manipulator claws were used to lift structural beams, clear debris, and assist in the rapid assembly of factories and refinery districts. As Nox Industries expanded deeper into contested territory during the Age of Endless War, the sturdy frame was quickly adapted for combat use, fitted with additional armour plating and military-grade weapon systems while retaining much of its original industrial architecture. Cheap to manufacture and highly adaptable, Hazards became a common sight both on front lines and within the growing factory sprawls of Nox-controlled territory, where they continue to serve as symbols of the corporation's belief that industry and warfare are one and the same.

CAUSTIC
MEDIUM RIG

The Caustic traces its origins to heavily armoured demolition platforms once used to tear apart collapsed structures and breach unstable refinery sectors contaminated by chemical runoff and structural decay. Its reinforced frontal plating and immense impact rams proved equally effective against fortifications and enemy war machines, leading Nox Industries to rapidly militarise the chassis for front-line assault operations. Over time, the Caustic evolved into one of Nox's most dependable combat platforms: durable, aggressive, and capable of operating effectively across a wide range of battlefield conditions. The Caustic remains a brutal expression of Nox doctrine: relentless advance through overwhelming industrial force.

SLEDGE
HEAVY RIG

Originally engineered for major industrial construction projects during the expansion of Nox's sprawling factory cities, the Sledge was built to transport enormous structural components and operate under punishing workloads for extended periods without shutdown. Its massive frame and exceptional load-bearing capacity later made it an ideal platform for oversized military weapon systems as warfare escalated across the Smoglands. Modern Sledges now field devastating long-range armaments protected by layers of thick alloy armour, allowing them to function as heavily fortified fire support platforms. Slow, imposing, and difficult to disable, the Sledge reflects Nox Industries' preference for machines built not for elegance, but for endurance.

MORDENT

COLOSSAL RIG

The Mordent was originally developed as a heavy industrial lifting platform used throughout Nox construction zones, where large dorsal crane assemblies allowed it to transport machinery and prefabricated structural components across unstable terrain. As the wars intensified and demand for mobile artillery increased, the Mordent was gradually refined with long-range bombardment weapons mounted upon the chassis' reinforced dorsal frame. Its stable quadrupedal design proved exceptionally effective at absorbing recoil during sustained artillery operations, allowing the Mordent to deliver accurate long-range fire. Today, these Rigs are commonly deployed behind advancing Nox formations, where the distant thunder of their guns often signals the beginning of a major offensive.

TRITON ENGINEERING

TRITON ENGINEERING was once the lifeblood of the old world, controlling vast oil platforms and maritime industries that fed the furnaces of expansion. When the Smogfall came, their offshore strongholds became sanctuaries. While cities on land suffocated in black skies, Triton's ocean platforms endured, fortified and guarded by the sea itself. From these bastions, they survived, clinging to their oil reserves and adapting their industrial diving suits into the first generations of maritime Rigs. In the centuries since, Triton has become an insular but formidable power, guarding what little remains of the Smogland's fuel.

Industry within Triton is resource-driven and pragmatic. Oil is everything, the last great reserves that power the engines of war and survival. Their platforms are floating fortresses, equipped with refineries, salvage yards, and recycling plants that ensure their longevity. Triton is less expansive than Nox or Krim, but its control of oil grants it a unique leverage: every corporation needs what Triton possesses. Their strength is measured not in scale of production, but in the scarcity of what they guard.

Life under Triton is defined by tradition and loyalty. Communities are bound by heritage, with families tracing their lineage back to the oil divers, engineers, and platform workers who first weathered the Smogfall. The sea has shaped their culture into one of pragmatism and resilience, where survival depends on trust and duty to the platform. Stability is earned through service, and betrayal is met with exile, a death sentence on the open waters.

Ironclads in Triton culture are chosen through rites of passage tied to the sea. Candidates descend into the depths in modified suits, tasked with recovering relics, salvage, or resources from dangerous wrecks. Those who return alive and successful are deemed worthy of piloting a Rig. Many of Triton's most celebrated Ironclads come from families who have served the corporation for generations, their service both an honour and a responsibility passed down like an heirloom. To pilot a Rig in Triton is to embody both heritage and sacrifice, a protector of the platforms and their way of life.

Triton fights not for conquest, but for preservation. Their doctrine is defensive, built around guarding their oil platforms and holding the seas against intruders. When forced to war, they strike with surgical precision, deploying naval forces and Rigs adapted for both land and maritime combat. Their machines are rugged and utilitarian, bearing the marks of their industrial roots. They lack the experimental flair of Arcus or the scale of Nox, but they endure, sturdy,

Psychomystile

practical, and built to outlast.

Relations are defined by their monopoly on oil. Nox covets their reserves, sparking constant skirmishes. The Krim views them as wasteful, while Arcus often partners with them in defence of the environment, though tension lingers between tradition and progress. With the Freegear, Triton occasionally finds common cause, but their loyalty is always to their platforms first.

Triton endures as the last great bastion of the oil seas - traditional, and unyielding, clinging to the ocean that has kept them alive since the world fell.

TRENCH
LIGHT RIG

The Trench was originally developed as a deep-water industrial diving suit used throughout Triton Engineering's offshore oil operations, allowing pilots to descend into the crushing darkness beneath the platforms to perform delicate maintenance on pipelines and submerged infrastructure. Compact, heavily sealed, and capable of operating both underwater and across unstable deck surfaces, the Trench quickly became an icon of Triton platform life and is widely regarded as the first true Triton Rig ever constructed. Even now, generations later, many Triton pilots trace their heritage back to the operators who first descended beneath the waves inside these machines. Though modern Trench variants are now commonly armed for combat, much of the chassis still reflects its industrial origins.

NAUTILUS
MEDIUM RIG

Developed following the success of the Trench platform, the Nautilus was designed to handle the increasingly demanding construction and salvage operations required to expand Triton Engineering's offshore infrastructure. Its enlarged frame and immense vice-like manipulator claws allowed it to lift heavy machinery, aiding both submerged worksites and storm-battered platform decks. As conflict spread across the Smoglands, the Nautilus' durable frame and powerful hydraulic systems proved easily adaptable for military service, transforming the once-industrial machine into a formidable combat platform capable of crushing enemy armour while enduring punishing battlefield conditions. Today, Nautilus formations remain common among Triton forces, valued for their resilience.

KRAKEN

HEAVY RIG

The Kraken was originally engineered for exploration and recovery operations within the dangerous depths beyond Triton's established drilling zones, where unstable terrain, collapsing seabeds, and violent underwater conditions rendered conventional industrial platforms ineffective. Its stable quadrupedal frame allowed it to traverse uneven surfaces with remarkable reliability while carrying heavy equipment across the ocean floor for extended durations. As warfare intensified and the demand for long-range firepower increased, the Kraken's broad chassis and exceptional stability made it an ideal weapons platform for oversized artillery and heavy support systems. Modern Krakens now serve as some of Triton Engineering's most feared long-range combat machines.

LEVIATHAN

COLOSSAL RIG

When the oil wells beneath the great platforms began to dwindle and rival Corporations turned increasingly hostile toward Triton Engineering's holdings, the platform councils recognised that survival would require more than defensive positions and fortified drilling stations. The Leviathan project was conceived as a direct answer to the escalating arms race consuming the Smoglands: a colossal war machine capable of protecting Triton territory through overwhelming force. Due to limited manufacturing resources and the urgency of the project, Leviathans were constructed using recycled Trench cockpit assemblies retrofitted into vast new armoured chassis, a practice that gave rise to the belief among Triton crews that every Leviathan carries the spirit of the old platform workers within its hull.

ARCUS TECHNOLOGIES

ARCUS TECHNOLOGIES rose from obscurity in the final years before the Smogfall, when a loose consortium of engineers and researchers warned of the atmospheric collapse to come. Their warnings were dismissed, their inventions deemed too costly, and their research buried by rivals who profited from unchecked industry. When the skies finally darkened, those who had ignored Arcus paid the price. The collective that once struggled to be heard became indispensable, their filtration towers and experimental arc-reactors suddenly the only means of survival. Out of necessity, Arcus transformed into a power of its own, and in the age Of Oil and Iron, it has become a force both feared and respected.

Arcus is a technocracy, governed not by aristocracy or brute hierarchy, but by intellect and invention. Its citizens live within towering, sealed enclaves powered by experimental energy systems, their survival tied directly to innovation. Knowledge is the highest currency in Arcus society, and those who advance its technology rise to prominence, while those who fail or stagnate are relegated to menial roles. It is a culture of progress, where the pursuit of solutions outweighs morality. For Arcus, survival depends on the mastery of the sciences.

Ironclads within Arcus are chosen through rigorous testing. Candidates are subjected to examinations of intellect, reflex, and psychological resilience, often drawn from the ranks of engineers and scientists who understand the very systems they are meant to pilot. The chosen are celebrated not as soldiers but as guardians of knowledge, entrusted to wield Rigs as precise instruments of both war and progress. An Arcus Ironclad is a pilot and a scientist in one, embodying the ideal of reason fused with survival.

Arcus wages war as an extension of its philosophy: measured, precise, and adaptive. Arcus strikes with calculation, their squadrons favour targeted raids and surgical strikes, dismantling supply lines and disabling key infrastructure rather than seeking direct confrontation.

Their Rigs are specialised, efficient, and often experimental. Many feature arc-reactors and advanced energy systems that allow for weapons or capabilities beyond conventional design. These machines are less numerous but highly adaptable. On the battlefield, they are surgical instruments of war, fewer in number, but devastatingly effective.

Relations with other factions are fraught with contradiction. Arcus views Krim as dangerous and inflexible. Nox Industries is both respected and despised: Arcus admires the

Psychomystile

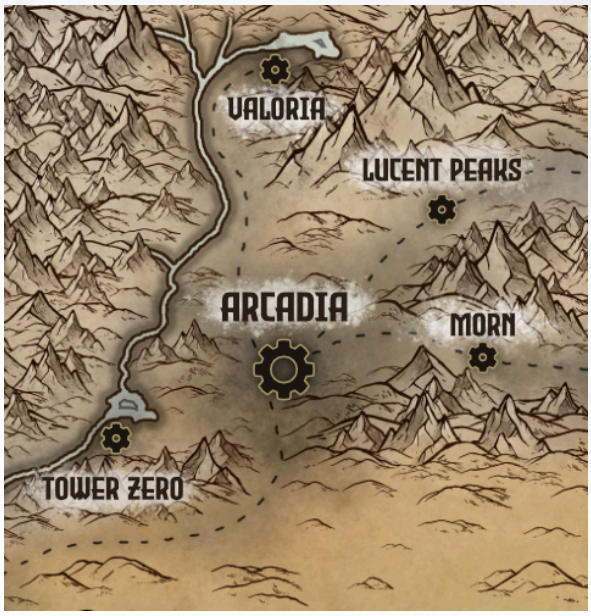
sheer scale of their industry, but abhors the devastation it causes. Their rivalry is bitter, marked by constant raids on Nox factories and convoys, with Nox retaliating in kind. Triton Engineering is Arcus' most natural ally, their shared focus on preservation forging occasional pacts, however they cannot agree on the continued use of oil. The Freegear Coalition, meanwhile, is treated with wary sympathy, Arcus sometimes funnels them resources to weaken corporate rivals, but the Coalition's rejection of all corporate power makes true alliance impossible.



They were the prophets no one heeded, the innovators who saw the fall coming, and the technocrats who built their own survival.

FLUX
LIGHT RIG

The Flux was originally developed by the Division of Voltaic Dynamics as a lightweight experimental platform intended to test compact Arc engine systems outside the controlled environments of Arcus arcologies. Built for speed and precision, the chassis proved exceptionally effective during reconnaissance operations and fast-response defensive actions along Arcus trade routes and fringe territories. Unlike the heavier industrial designs fielded by other Corporations, the Flux relied upon agility and advanced targeting systems rather than armour alone, using bursts of volatile arc energy to disable enemy systems before retaliation could be coordinated. The Flux became a symbol of Arcus' belief that superior engineering and calculated force could overcome the crude, slow brutality dominating the Smoglands.

DYNAMO
MEDIUM RIG

The Dynamo was introduced as Arcus Technologies' primary front-line combat Rig, designed to provide a balanced and dependable weapons platform capable of supporting the smaller, highly specialised squadrons fielded by the Corporation. Built around an efficient arc-reactor system and sophisticated energy distribution architecture, the Dynamo combined mobility, precision weaponry, and advanced cooling systems within a relatively compact chassis. While lacking the raw durability of heavier industrial platforms, the Dynamo excelled in coordinated operations where disciplined formations and superior battlefield control allowed Arcus forces to dismantle larger enemies through precision strikes and sustained energy fire.

GALVANIC

The Galvanic was engineered as a heavy assault platform capable of mounting oversized Arc weapon systems previously considered too unstable for mobile deployment. Developed jointly between the Division of Energetic Phenomena and the Division of Structural Metallurgy, the chassis was constructed around extensive cooling assemblies designed to contain the immense electrical loads generated during combat operations. On the battlefield, Galvanics are feared for their ability to unleash devastating bursts of arc energy capable of crippling enemy systems and punching through heavily armoured targets with terrifying efficiency.

TEMPEST

COLOSSAL RIG

The Tempest represents the pinnacle of Arcus Technologies' experimental war engineering: a colossal Arc-powered platform designed to dominate entire battlefields through overwhelming energy projection. Towering above conventional Rig squadrons, the Tempest mounts massive capacitor banks and long-range arc weaponry capable of unleashing devastating electrical bombardments across battlefields. During operation, the machine's reactor systems generate violent atmospheric interference, filling the surrounding air with static discharge, and arcs of uncontrolled electricity that have given rise to numerous battlefield superstitions among enemy forces. Rarely deployed outside major conflicts, the appearance of a Tempest is feared amongst commanders in every corporation.

FREEGEAR COALITION

The **FREEGEAR COALITION** was born not in boardrooms or fortified cities, but in the ashes left behind by the Smogfall. When corporations seized the last filtered enclaves and abandoned the weak to their fate, survivors banded together out of necessity. Escaped workers, deserters, engineers, and exiled families pooled their resources and knowledge, creating scattered enclaves hidden in ruins and wastelands. At first, these groups were fragile and isolated. Over time, however, they forged bonds, uniting under a simple creed: survival without submission. Thus the Freegear Coalition emerged, a federation of rebels, scavengers, and independents bound by their refusal to live under corporate rule.

Freegear society is decentralised and communal. No board of directors or aristocratic bloodlines dictate their lives. Each enclave governs itself, but together they share resources, knowledge, and protection. While corporations demand obedience and sacrifice, the Coalition values independence, ingenuity, and community. Their culture is one of resilience, refusing to surrender to corporate oppression.

Ironclads of the Freegear are chosen not by lineage or indoctrination, but by the people. A pilot earns their place through courage, skill, or acts of defiance that prove their worth to their community. Some are deserters who stole their Rigs from corporate armies, others are mechanics who built their own from salvage, and a few are everyday rebels thrust into the role out of necessity. Their Rigs are practical, often a patchwork of stolen parts and improvised weaponry, painted with symbols or slogans of resistance. A Freegear Ironclad carries not just a machine into battle, but the voice of their people.

The Coalition does not fight like a traditional army. They cannot match Krim's endless logistics or Nox's industrial juggernaut, so they fight on their own terms. Freegear squadrons raid convoys, ambush supply lines, and sabotage factories, striking where corporations are weakest. Their Rigs are unpredictable, reflecting their pilots' ingenuity more than any standardised doctrine. What they lack in numbers or refinement, they make up for in adaptability and surprise.

Relations with the great corporations are tense at best. Krim considers Freegear an intolerable defiance of order, an enemy to be crushed above all others. Nox barely acknowledges them, treating them as pests to be crushed when they interfere with their industrial expansion. Arcus occasionally offers sympathetic support, seeing them as a useful counterweight to rival powers, though the Coalition never forgets Arcus remains a

corporation at heart. Triton sometimes finds common ground with Freegear when defending against great corporations, but Triton's insularity prevents any lasting alliance.

The Freegear Coalition is not a superpower; it is an idea. Where the corporations see citizens as tools to be consumed, Freegear offers another path, one of rebellion, independence, and survival on their own terms. For many scattered souls of the Smoglands, they represent resistance and hope: proof that life can exist beyond the corporate walls.

HIJACK
LIGHT RIG

The Hijack originated within the scattered workshops and salvage convoys of the early Freegear Coalition, where mechanics and deserters began rebuilding abandoned and wrecked industrial walkers into crude but highly adaptable combat machines. Constructed from a constantly changing mixture of salvaged components, the Hijack was never intended to conform to standardised manufacturing patterns, with many individual chassis differing significantly from one another depending on available parts and the experience of their crews. Fast, unpredictable, and easy to repair in the field, Hijacks became favoured among raiding groups striking at corporate supply lines throughout the Smoglands. The Hijack became proof that survival did not require corporate ownership.

SCRAPHOUND

MEDIUM RIG

The Scraphound was developed specifically for long-range salvage expeditions deep within the wastelands, where Freegear crews required machines capable of hauling recovered machinery and stripped iron plating back to hidden settlements and their workshops. Built around a rugged frame assembled from reclaimed industrial parts, the Scraphound prioritised reliability and carrying capacity over refinement, allowing it to continue operating long after more sophisticated machines had failed. As conflict intensified across the Smoglands, many Scraphounds were armed and reinforced for combat, serving as dependable support platforms. Among Freegear crews, a well-maintained Scraphound is often valued more highly than weapons themselves.

DEFIANCE

HEAVY RIG

The Defiance emerged during the growing conflicts between the Freegear Coalition and the expanding corporate powers, designed by former Ironclads and renegade engineers who sought to create a true front-line combat Rig independent of corporate manufacturing doctrine. Unlike many earlier Freegear platforms cobbled together from industrial machinery, the Defiance was intentionally engineered for war from the outset, though still heavily reliant on salvaged components and improvised systems. Its adaptable chassis allowed crews to field a wide variety of scavenged weaponry and battlefield modifications, making no two Defiance platforms entirely alike. The Rig became a symbol of organised resistance against corporate control, often seen at the frontlines of raiding parties and strong defensive firing lines.

RAMPART

COLOSSAL RIG

The Rampart is an exceptionally rare super-heavy platform developed by the Freegear Coalition during the escalating territorial wars of the late Age of Endless War. Limited industrial capacity and the immense resources required to maintain such a machine mean that very few Ramparts exist, with sightings of even a single operational platform considered unusual throughout the wastelands. Mounted upon its immense chassis is the largest known cannon in the Smoglands, a devastating artillery weapon capable of crippling entire squadrons at extreme distances. Within Freegear society, the appearance of a Rampart carries enormous symbolic weight; citizens gather in great numbers simply to witness the machine as it passes through their territories, and its departure for war is often marked by celebrations and fuel offerings.

MERCENARY NOMADS

Not all Rig manufacturers were consumed during the rise of the great Corporations.

Scattered throughout the Smoglands remain numerous smaller foundries and independent manufacturing houses that survived the Corporate Ascendancy through negotiation or continued usefulness to the dominant powers surrounding them. While many were fully absorbed into the vast war economies of the major Corporations, others retained limited independence by supplying specialised machinery, maintaining industrial infrastructure, or producing small numbers of militarised Rig chassis under corporate oversight.

These surviving manufacturers became the primary source of military hardware for the Mercenary Nomads.

Unlike the standing armies of the major Corporations, Nomad forces possess no centralised industrial base of their own. Instead, Nomad Ironclads purchase, barter, salvage, or commission their Rigs directly from the smaller subsidiary manufacturers operating within the fringes of corporate territory. As a result, many Nomad squadrons are closely associated with the manufacturers that supply them, often fielding distinct chassis patterns tied to particular foundries or industrial regions.

Though officially independent, these minor manufacturers rarely exist entirely outside the influence of the great Corporations. Most operate within corporate borders, pay heavy taxation, or rely upon protection agreements in order to continue manufacturing military-grade equipment. In return, the Corporations tolerate the continued trade of militarised Rigs for practical reasons. Nomad activity stabilises dangerous frontier regions, protects trade routes, generates valuable taxation, and allows conflicts to be fought indirectly without committing official military assets.

As a result, relationships between Nomad groups, minor manufacturers, and the major Corporations vary greatly throughout the Smoglands. Some manufacturers maintain close economic and political ties to their parent Corporations, while others quietly arm those willing to fight against them.

Despite their reputation for opportunism, many Nomad crews possess considerable battlefield experience, having survived conditions and conflicts that would destroy conventional military formations. Their machines are often poorly standardised and maintained through constant salvage and repair, but in the hands of experienced Ironclads they remain every bit as dangerous as the mass-produced Rigs fielded by the great Corporations.

Mercenary Nomad chassis and those of the minor manufacturers may be fielded freely in any standard Squadron, whether alongside a single corporation's Rigs or in a mixed force. In a Campaign, Nomad support follows the Mercenary Nomad for Hire rules in the Aftermath Phase.

MINOR CORPORATIONS

Vost Armouries

Operating deep within the industrial territories of the Krim Corporation, Vost Armories specialises in fast and adaptable combat platforms intended for frontier conflicts, convoy defence, and independent military contracts. Though officially subordinate to Krim military authority, Vost maintains a reputation for producing reliable and versatile machines popular among Mercenary Nomads operating beyond the reach of major supply lines.

Kaido Dynamics

Kaido Dynamics is an experimental manufacturer operating along the outer territories bordering Nox Industries and the southern trade routes. Known for advanced venting systems and volatile plasma-based weapon technologies, Kaido's machines are highly sought after by experienced Ironclads despite their demanding maintenance requirements and unpredictable battlefield behaviour.

Harrow Industrial

Harrow Industrial provides land-based industrial and defensive support for Triton Engineering's sprawling offshore operations, manufacturing rugged utility platforms capable of operating in unstable coastal environments and refinery districts. Their machines are known for their durability, simple maintenance requirements, and strong defensive capabilities, making them a common sight protecting supply depots and frontier settlements throughout Triton-aligned territories.

Lucent Arcworks

Lucent Arcworks operates under the technological shadow of Arcus Technologies, producing highly specialised combat platforms built around advanced energy systems and experimental battlefield technologies. Though smaller in scale than the great Arcus divisions, Lucent remains respected for its refined engineering standards and willingness to pursue unconventional reactor and weapons research unsuitable for larger production programs.

Salvager's Union

The Salvager's Union is not a single corporation, but a decentralised network of roaming salvage convoys and hidden workshops scattered throughout the Smoglands. Serving as one of the primary industrial backbones of the Freegear Coalition, the Union specialises not only in adapting salvaged machinery into functional war machines, but also in the dangerous recovery of materials and wrecked Rigs from the battlefields of the Smoglands. Much of the raw metal, parts and fuel sustaining Freegear settlements passes through Salvager's Union hands at some stage.

LANCER
MEDIUM RIG

The Lancer was developed by Vost Armories as a fast and highly adaptable combat platform intended to serve the growing demand for flexible front-line Rigs throughout the Krim territories. Built around a lightweight but durable frame with a wide variety of compatible weapon configurations, the Lancer quickly earned a reputation as an exceptionally versatile battlefield machine capable of fulfilling reconnaissance, assault, escort, and skirmishing roles with equal effectiveness. Even outside Krim influence, the silhouette of a Lancer has become a familiar sight accompanying convoys, roaming wasteland trade routes, and fighting in countless smaller skirmishes across the Smoglands. For many Mercenary Ironclads, purchasing a Lancer for their squadrons has never been a regretful decision.

DRIFTER
MEDIUM RIG

The Drifter was developed by Kaido Dynamics, an experimental manufacturer operating within the outer territories of Nox Industries under heavy corporate sponsorship. Unlike the mass-produced industrial war machines favoured by Nox, Kaido Dynamics pursued more advanced and unconventional technologies, The Drifter emerged as the company's most successful combat platform: a fast and adaptable medium Rig. To compensate for the immense heat generated by its experimental systems, the chassis incorporates advanced venting assemblies and enhanced cooling architecture far beyond what is commonly found on standard industrial Rigs, allowing experienced Ironclads to sustain aggressive combat output. Drifters are highly sought after for their state of the art technologies.

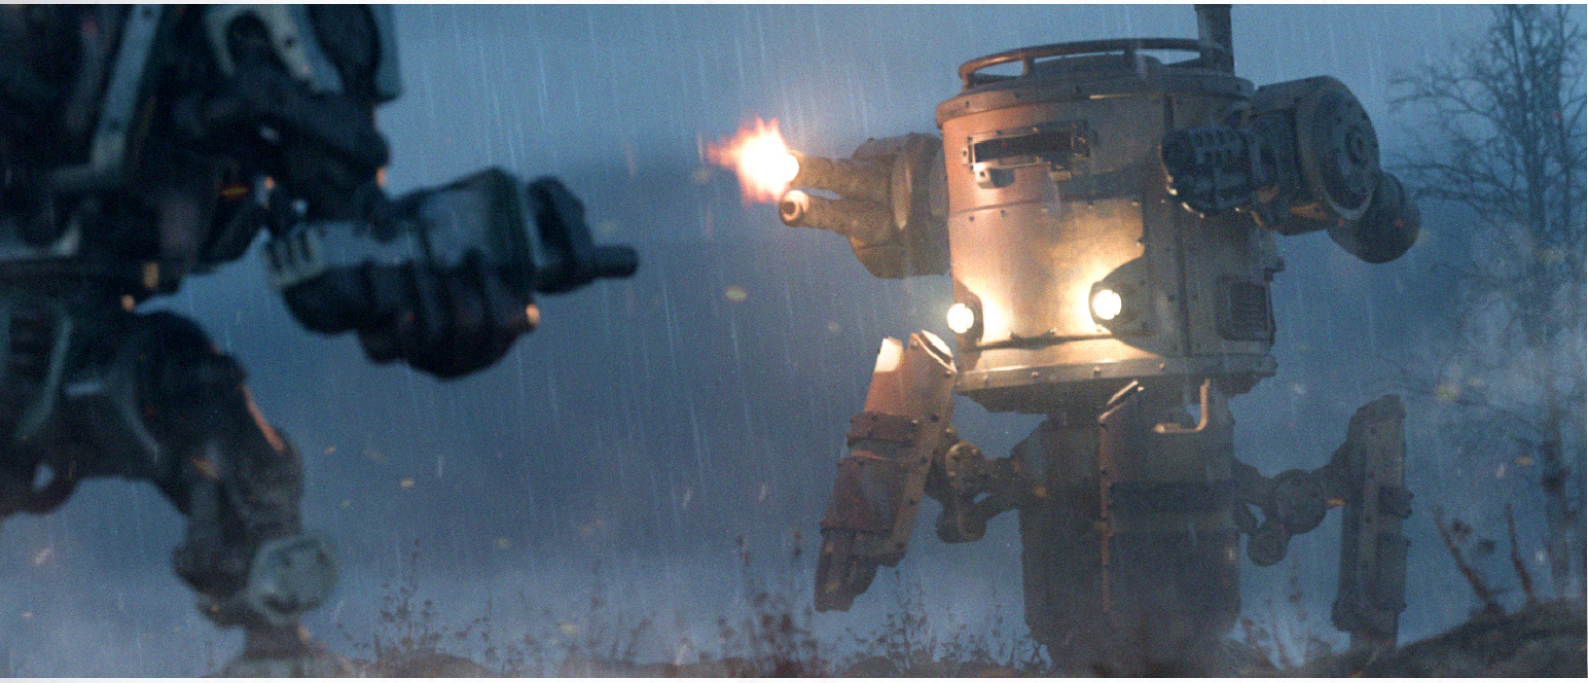
SILO
LIGHT RIG



Originally developed by Harrow Industrial as a compact demolition and industrial clearance platform, the Silo was designed to operate across the harsh refinery zones and collapsing coastal infrastructure surrounding Triton Engineering's land-based holdings. Its stable quadrupedal frame allowed it to traverse uneven terrain while carrying heavy industrial tools used to dismantle ruined structures and clear defensive obstacles. As conflict across the Smoglands intensified, Harrow Industrial adapted the inexpensive chassis for military use, fitting the machine with armour plating and combat weapon systems. Cheap to cast and easy to maintain, the Silo became widely used as a defensive support Rig protecting supply depots, refinery corridors, and frontier settlements aligned with Triton Engineering.

VAGABOND

LIGHT RIG

The Vagabond was developed by the Salvager's Union as a long-range recovery and transport platform intended to support Nomad expeditions operating deep within the wastelands beyond established trade routes. Built around a lightweight but durable chassis, the machine features oversized fuel reserves and a powerful industrial loader arm capable of lifting wrecked components, recovering damaged machinery, and hauling salvage across difficult terrain for extended periods without resupply. Though never intended as a dedicated combat platform, the harsh realities of the Smoglands saw many Vagabonds gradually armed and reinforced to defend themselves against rival salvage crews.

RIG EQUIPMENT

Equipment offers unique strategies and loadouts for Rigs. Each Equipment can only be taken once per Rig. Equipment with “Discard” should only be discarded after successful use. Where an Equipment is activated and generates heat, this is noted in square brackets **[X].**

Equipment Table A - *Improving attacks, accuracy and range*

Equipment Name	Effect	Iron
1. Penetrating Rounds	Choose one ranged weapon. It has the "Penetrating" perk.	2
2. High Calibre Ammunition	Choose one ranged weapon on this Rig, it has +1 STR.	3
3. Hot Point Ammunition	When this Rig's heat is equal to or higher than the Heat Threshold, ranged weapons have +1 STR.	2
4. Advanced Ammo Storage	May re-roll any hit rolls for one attack made with a ranged weapon. Discard.	1
5. Synchronised Flexor Motors	If this Rig equips two identical Melee weapons, it may re-roll all failed hit rolls once per attack action.	2
6. Extended Barrel	Choose one ranged weapon on this Rig, add 2" / 4" RNG to its SR and LR profile.	1
7. Stabilised Weapon Joints	This Rig may make attack actions within a 180’ firing arc.	2
8. Sophisticated Periscopes	Gain +1 ACC when attacking with weapons targeting enemy Rigs that are in LOS and within 6".	1
9. Arc-Enhanced Targeting System	Gain +1 ACC when attacking with ranged weapons targeting enemy Rigs that are within LOS and are further than 12" away.	1
10. Thermal Sights	This Rig has +1 ACC bonus against Rigs whose Heat is above the Heat Threshold.	2
11. Flare Launchers	Fire a bright flare into the sky, marking a location on the battlefield. Until the end of the round, ALL Rigs gain +1 ACC attack rolls against targets within line of sight and 6" of the flare. Discard.	2
12. Artillery Spotting Module	This Rig may use an action [1] to call in an artillery bombardment anywhere within line of sight. Roll a D12 for each Rig within 6" of the location. On a 9+, a Rig suffers 1 STR 8 hit. Roll for location. Discard.	2

Equipment Table B - *Protection, movement and engine / heat management*

Equipment Name	Effect	Iron
1. Reinforced Iron Plating	This Rig has +1 to armour rolls against front facing attacks.	3
2. Ablative Armour Plating	After this Rig receives damage from an attack, ignore that damage. Discard.	2
3. Impact Roll Cage	This Rig has +1 to armour rolls when targeted by melee and ram attacks.	1
4. Reinforced Leg Joints	The Rig gains immunity to Slowed and Immobilised.	2
5. Concentrated Fuel	This Rig has +2" to SPD. If the Rig suffers a Fuel Line Rupture, take 2 additional damage to the engine.	2
6. Heat Conductive Lubricants	If this Rig's engine heat is above the threshold, it has +2 SPD.	1
7. Hydraulic Anchor Spikes	If this Rig remained stationary and did not move during its turn, it has +1 ACC. If it fires with this bonus, it may not move until the end of the round.	2
8. Extinguisher	When making a Heat Threshold roll, first roll a D12. On a 4+, ignore the Heat Threshold roll. Discard.	1
9. Exotic Engine Coolant	Reduce final results of Heat Threshold Rolls by 1.	1
10. Thermal Purge Vent	If this Rig remained stationary and did not move during its turn, reduce Engine Heat by 2 in the Maintenance Phase.	2
11. Supplementary Heat Vent	When this Rig's heat is higher than the Heat Threshold, it may use a Vent Heat Action [0] once per activation. This Rig's next attack costs [-1] but suffers -1 ACC.	1
12. External Fuel Tanks	The next action does not generate any heat. Discard.	1

Equipment Table C - *Battlefield tricks, reactions and campaign-only gear*

Equipment Name	Effect	Iron
1. Smoke Dispensers	Use an action to deploy a smokescreen [1]. ALL Rigs within 6" of this Rig are considered to be in Light Cover until the end of the round.	2
2. Reflexive Sensor Unit	At any time, place any preparation token next to any one friendly Rig without generating heat. Discard.	1
3. Manual Override Panel	Re-roll any dice, at the cost of generating 1 heat per dice re-rolled. Dice re-rolled this way can only be re-rolled once.	1
4. Grapple Winch Unit	Make an attack action with RNG 8" and ACC +1 for [0]. If the target is equal to or lighter in weight class, move the target Rig directly towards this Rig by D6+2". If the target is of heavier weight class, move toward the target Rig instead. A Rig stops being pulled if it collides with terrain. Discard.	1
5. Radio Scrambler	Choose an enemy Rig within 18". Each controlling player rolls a D12. If the target Rig rolls lower, that Rig is Stalled. Discard.	1
6. Ramming Frame	This Rig may use the "Ram" action while suffering only half damage to itself, rounded up.	2
7. Unstable Power Source	As an action, the Rig may choose to self destruct. It is destroyed and automatically explodes.	1
8. Emergency Repair Kit	Restore 3 Structure Points to any damaged part of the Rig. Discard.	2
9. Battlefield Recovery Rig	[CAMPAIGN ONLY] When purchased in the campaign, the Recovery Rig allows the player to roll on the salvage table D3 times in the *Salvage the Battlefield* step in the *Aftermath Phase.*	5
10. Iron Market Parts Cache	[CAMPAIGN ONLY] Once per Aftermath Phase, when repairing a Rig, ignore one permanent negative trait gained from repairs.	3
11. Contracted Recovery Crew	[CAMPAIGN ONLY] When checking if a destroyed Rig is lost, add +2 to the recovery roll. This equipment does not function if the Rig exploded.	3
12. Experimental Load-Bearing Frame	[CAMPAIGN ONLY] Choose a Rig in your Squadron, it gains +1 Iron capacity.	3

DEPLOYING TO WAR

Of Oil and Iron is a setting shaped by rival corporations, roaming nomads, and the brutal struggle for control of the Smoglands.

In this section, you will find rules for Engagements, the standard way to play *Of Oil and Iron*, and also the Campaign, which ties together multiple Engagements into a longer, story driven system.

To play an Engagement, players must:

- Choose a Squadron Formation, of the same type (Skirmish, Operation or Warfront).
- Equip Weapons and Equipment on the Rigs of their chosen Squadron type.
- Choose a Deployment.
- Choose an Engagement.
- Set up the Battlefield.

Following the rules for Engagements are Special Engagements, which have specified Deployments. These Engagements are a more narrative way to play, and may be less balanced than standard Engagements.

ASSEMBLING A SQUADRON

A collection of Rigs fielded to battle are known as a Squadron. Squadrons are fielded in formations dependent on the size of the engagement. Players agree on an Engagement, then choose a Squadron Formation from the available selection. Players add to their squadron the Rigs listed on the Squadron Formation.

Of Oil and Iron has no army-points system. Balance in standard play comes from both sides fielding a Squadron Formation of the same type; within their Iron capacity, players are free to equip their Rigs however they wish. Players may choose to field different Squadron formations of the same formation type for a more narrative experience.

SKIRMISH

Formation	Light	Medium	Heavy	Colossal
Sword	2	1		
Mace	1	1	1	
Dagger	4			

OPERATION

Formation	Light	Medium	Heavy	Colossal
Claymore	1	1	1	1
Broadsword	3	1		1
Lance	1	2	2	
Morningstar	1	3	1	
Axe		1	3	

WARFRONT

Formation	Light	Medium	Heavy	Colossal
Battleaxe		2	2	2
Greatsword	4	2	1	1
Warhammer		2	3	1
Scythe	3		2	2
Maul		2	4	

A Skirmish or an Operation are recommended for most players, while a Warfront would be a lengthy battle.

Each Rig may be fielded with its corresponding printed Rig Command Terminal, Weapon Cards and Equipment Cards. However players may choose to use the Squadron Roster to fill out this information instead - which is a more printer-friendly version to play, encapsulating all of the information on the terminal and card assets. This can be found at the back of this book.

Iron Costs

When outfitting a Rig, players must carefully choose weapons and equipment within the limits of the Rig's Iron Capacity. Each Rig has a fixed Iron Capacity that determines how much gear it can carry, with heavier weapons and advanced equipment costing more Iron.

Players must strategise to create efficient and effective loadouts, balancing powerful options with the constraints of the Rig's capacity. Choose wisely, every weapon and piece of equipment shapes how your Rig performs on the battlefield!

Equipping Weapons and Equipment

Equipping weapons on a Rig is a critical step in customising its battlefield role and effectiveness. Each Rig has specific restrictions based on its weight class and manufacturer, and the equippable weapons are listed in the Rig Operating Manual (p 41).

Colossal Rigs may equip a single additional Hull-Mounted Weapon, giving them extra firepower.

While there are weapon cards for each weapon included with each Rig, a summary of weapons is included which are useful when preparing the Rig Squadron Roster.

All Rigs must always equip at least two weapons. After equipping weapons, Rigs may use the remaining Iron to equip Equipment. Equipment may only be equipped once per Rig.

A Rig may equip two of the same weapon, and may fill both weapon slots with melee weapons. A Rig equipped with two melee weapons gains the benefits described under the Melee weapon perk.

ENGAGEMENTS

Whenever players sit down for a game of *Of Oil and Iron*, they are agreeing to play an Engagement. An Engagement outlines how both sides deploy their Rigs, how long the battle takes, and what conditions decide victory.

Players can choose an Engagement or roll randomly for one using a D12 and consulting the table below. Engagements 9-12 are Special Engagements, with asymmetric objectives.

Roll	Engagement
1	Iron Clash
2	High Value Target
3	Point of Control
4	Total Command
5	Push the Line
6	Supply Airdrop
7	Salvage Heist
8	Sabotage

The Battlefield

The Smoglands stretch across a vast region of broken industry, abandoned frontiers, polluted coasts, and scattered enclaves of corporate power. Battles take place across an enormous range of environments.

Designed to fit on a kitchen table for accessible gaming, there are a choice of effective game board sizes widely available in the market. Players may choose any size of board in combination with any Engagement.

- 22 x 30 inches
- 24 x 24 inches
- 36 x 36 inches

22 x 30 inches is the standard for the Engagements in this rulebook. Players using a smaller or larger battlefield should adjust distances and deployment zones as needed.

When deploying Warfront sized Squadrons, a larger battlefield is recommended (36 x 36 inches, or more!).

Terrain

The battlefield is more than scenery. It shapes the flow of combat. Dense ruins give Light Rigs places to skirmish. Open ground allows Heavy Rigs to bring their full power to bear. Elevated structures, trenches, pipelines, broken Rigs, slag piles, abandoned Rigs, and storm barriers all play a part in how each Rig fights. Choosing diverse terrain creates memorable battles!

There are very few battles that take place over a wide, open wasteland devoid of features. Players can choose and agree upon the amount and density of terrain. Certain Engagements will suggest terrain types and amounts, but players should build the battlefield that they want to play on.

When placing terrain, players should alternate placing a piece of terrain, until they both agree the battlefield is sufficiently populated with terrain.

Terrain in *Of Oil and Iron* offers blocking of line of sight, and are simple in their implementation:

When choosing how much terrain to add to the battlefield for the Engagement, players can choose a level of terrain density, or roll on the following table, unless otherwise specified in the Engagement.

D6 Roll	Terrain Density
1-2	Low 10%
3-4	Medium 30%
5-6	High 50%

This will be noted as "Standard Engagement". Certain Engagements may have different rules or recommendations for the battlefield and terrain.

Engagement Length

Engagements usually last between 4 and 6 rounds unless specific victory conditions are met. At the end of the 4th round, roll a D12. On a roll of 8+, the Engagement ends. Otherwise, roll again at the end of the 5th round - this time, the Engagement ends on a roll of 5+. The Engagement automatically ends at the end of the 6th round.

This will be noted as "Standard Engagement". Certain Engagements may have different rules for the length of Engagement.

Deployments

Deployments show players where their Squadrons begin the Engagement. Each deployment map illustrates the battlefield divided into a grid, with every square representing a 5 inch by 5 inch area. These examples use the standard 22 x 30 inch battlefield size, and should be adjusted based

Psychomystile
© Scoutsifer Studio. All Rights Reserved

on player preference if other board sizes are used.

Players can choose a Deployment, or roll a D12 and consult the numbered list of Deployments to choose randomly.

When deploying, players roll off to see who deploys first. Then, starting with the winning player, players take turns placing one Rig in their deployment zone, until all Rigs are deployed.

This will be noted as "Standard Deployment". Certain Engagements may have different rules for Deployment.

OBJECTIVES

Objectives represent strategic assets, resource caches, transmission relays, fuel depots, salvage sites, or other valuable locations across the battlefield. Many Engagements use Objectives to determine victory.

Objectives may be represented using the provided tokens, terrain pieces, or any suitably thematic models agreed upon by both players.

Unless stated otherwise by the Engagement, Objectives should be placed at least 6" away from all battlefield edges and at least 6" away from each other.

A Rig controls an Objective if it is within 3" of it. Unless otherwise stated, a Rig may only control one Objective at a time. If both players have Rigs controlling the same Objective, it is contested and neither player controls it.

When an engagement instructs to use an objective, players may choose which objective type to use for the game. Salvage and Valuable Asset objectives are only used for certain engagements.

Domination: The player with the greatest number of Rigs controlling the Objective controls it.

Weight of Iron: The player with the heaviest weight class Rig controlling the objective controls it.

Heat Supremacy: The player with the Rig that has the hottest engine controlling the objective controls it.

Salvage: A Rig, when within 1" of the objective, may perform an action with a heat cost of [2], to collect the piece of salvage. Remove it from the battlefield and place it next to the capturing Rig's control terminal.

In campaign mode, each Salvage objective is worth 3 Salvage.

This objective may not be suitable for all engagements.

Valuable Asset: This objective requires to be destroyed to claim it, using the following profile:

Structure Points	Armour
8	5+

Victory Points

Many engagements use Victory Points (VP). Usually the player with the most VP at the end of the engagement wins the game.

ENGAGEMENT: IRON CLASH

Corporations collide in the open wastes where ruined pipelines and mud plains stretch into the horizon. Neither side expected resistance, but both refuse to back down. Their objective: destroy the enemy.

Battlefield and Deployment

Standard Engagement.

Engagement Length

Standard Engagement, or when one Squadron is left standing.

Engagement Special Rules

Destroy the enemy Squadron.

Victory Conditions

Players total the VP earned from objectives. Highest score at the end of the engagement wins.

Players receive VP for each enemy Rig they have destroyed based on the Rig's weight class:

Weight Class	Victory Points
Light	2
Medium	3
Heavy	4
Colossal	5

ENGAGEMENT: HIGH VALUE TARGET

Some assets are worth more than an entire battlefield. A prototype Rig, a command unit, a corporate defector… Whatever it is, its destruction or extraction will shift the balance of power. Expect overwhelming resistance and no margin for error.

Battlefield and Deployment

Standard Engagement.

Engagement Length

Standard Engagement, or when all but one High Value Target is eliminated.

Engagement Special Rules

Each player must then nominate one of their Rigs as their High Value Target.

Eliminate the opponent's High Value Target.

Victory Conditions

The last player with their High Value Target still intact wins the engagement.

ENGAGEMENT: POINT OF CONTROL

Refineries, oil stockpiles, choke points… Hold them, and the battlefield bends to your will. Lose them, and your forces rust in the dust while the enemy tightens its grip.

Battlefield and Deployment

Standard Engagement.

Each player then takes turns places two objectives.

Engagement Length

Standard Engagement.

Engagement Special Rules

At the end of each round, each player gets 2 VP for each controlled objective.

Victory Conditions

Players total the VP earned from objectives. The player with the highest score at the end of the engagement wins.

Players also receive Victory Points for each enemy Rig they have destroyed based on the Rig's weight class:

Weight Class	Victory Points
Light	2
Medium	3
Heavy	4
Colossal	5

ENGAGEMENT: TOTAL COMMAND

Secure command zones, crush resistance, and prove to the Smoglands your corporation controls the battlefield from horizon to horizon.

Battlefield and Deployment

Standard Engagement. Players take turns placing one objective each.

Engagement Length

Standard Engagement or until a player achieves total control.

Engagement Special Rules

The game ends when one player controls both objectives.

Victory Conditions

If a player controls both objectives at the end of any round, that player wins immediately.

If neither player achieves total control by the end, the engagement is a draw.

ENGAGEMENT: PUSH THE LINE

The frontline is no longer a boundary, it's an objective. Advance into enemy territory and secure ground. Every position taken must be defended, every gain paid for in oil and iron. Fall back, and the enemy reclaims everything.

Battlefield and Deployment

Use Deployment 1 or 2.

Engagement Length

Standard Engagement.

Engagement Special Rules

At the start of each round, players earn 2 VP for each of their Rigs inside the opponent's territory.

Victory Conditions

Players total the VP earned from destroying enemy Rigs. The player with the highest score at the end of the engagement wins.

Players also receive VP for each enemy Rig they have destroyed based on the Rig's weight class:

Weight Class	Victory Points
Light	2
Medium	3
Heavy	4
Colossal	5

ENGAGEMENT: SUPPLY AIRDROP

In the Smoglands, logistics win wars. Crates slam into the dirt under fire, packed with fuel, munitions, and machine parts. Resources are precious here, and you must take everything you can.

Battlefield and Deployment

Standard Engagement. Divide the battlefield equally into 4 quadrants, numbering each.

Engagement Length

Five rounds.

Engagement Special Rules

At the start of the second round, roll a D6.

1 to 4: place the objective in the corresponding table quarter.

5 to 6: place the objective in the centre of the battlefield.

The player controlling the objective at the end of round five wins.

Victory Conditions

The player controlling the objective at the end of the engagement wins.

ENGAGEMENT: SALVAGE HEIST

Battlefields are goldmines for those bold enough to strip them bare. Wrecked Rigs are of high salvage value! Grab what you can before the enemy realises what you're stealing… and why.

Battlefield and Deployment

Standard Engagement. Each player then take turns placing three objectives each.

Engagement Length

Standard Engagement.

Engagement Special Rules

Use Salvage Objectives. Each Salvage Objective is worth 2 VP.

Victory Conditions

Players total the VP earned from objectives. The player with the highest score at the end of the engagement wins.

ENGAGEMENT: SABOTAGE

Not every victory comes from a kill. From ruptured pipelines to disabled generators, small acts of destruction can cripple entire offensives. Strike fast, disappear faster.

Battlefield and Deployment

Standard Engagement. Each player then take turns placing three objectives each under their control.

Engagement Length

Four rounds.

Engagement Special Rules

Use Valuable Asset objectives with the following profile.

Structure Points	Armour
8	5+

Victory Conditions

The first player to destroy each of the other player's objectives wins.

Psychomystic

SPECIAL ENGAGEMENT: AMBUSH

The first warning is muzzle flash through the smog. Engines roar to life as fire rains down from concealed positions. Strike the enemy while you have the advantage.

Battlefield and Deployment

Standard Engagement. Use Deployment 9.

Engagement Length

Standard Engagement.

Engagement Special Rules

This Engagement is for two players. One player is the *Ambusher*, the other is the *Target*.

The *Target* deploys their Squadron first. After the Target has deployed all Rigs, the Ambusher secretly notes the position of each of their Rigs using markers, tokens, or a sketch, anywhere 4" from the battlefield edge.

During the first round, all Target Rigs count as having *Preparation: Brace for Incoming Fire* active against the first attack made against them.

Victory Conditions

Players receive VP for each enemy Rig they have destroyed based on the Rig's weight class, the player with the most wins:

Weight Class	Victory Points
Light	2
Medium	3
Heavy	4
Colossal	5

SPECIAL ENGAGEMENT: HOLD THE LINE

Retreat is not authorized. Behind you lies infrastructure, civilians, or something far more valuable. The enemy will come in waves, testing iron and resolve. The line must hold, no matter the cost.

Battlefield and Deployment

Standard Engagement. Use deployment 5 or 9.

Engagement Length

Four rounds.

Engagement Special Rules

This Engagement is for two players or two teams of players. One player / team will be the Attacker and the other will be the Defender. The Defender cannot leave their Deployment Zone.

Victory Conditions

If the Defender has 50% of their Squadron (rounded up) still operational, they win the Engagement. Otherwise, the Attacker wins the Engagement.

Psychomystile

SPECIAL ENGAGEMENT: BREAKTHROUGH

The enemy line is strong, but not unbreakable. Relentless pressure and raw momentum are your weapons. Punch through, split their forces, and turn a stalemate into a rout.

Battlefield and Deployment

Standard Engagement. Use Deployment 5.

Engagement Length

Standard Engagement.

Engagement Special Rules

This Engagement is for two players or teams of players. One player /team will be the Attacker and the other will be the Defender. The Attacker is considered "Player 1" on the Deployment map.

Victory Conditions

The Attacker must move at least 50% of their Squadron (rounded up) to the opposite side of the battlefield, exiting the other side to win. Otherwise, the Defender wins.

SPECIAL ENGAGEMENT: SIEGE

The enemy's power is concentrated behind reinforced walls and layered defences. Command hubs, refineries, and foundries lie within. Break through the outer ring and collapse the city from the inside.

Battlefield and Deployment

Standard Engagement. Each player then takes turns placing three valuable asset objectives, for a total of six - one at a time.

Engagement Length

Standard Engagement.

Engagement Special Rules

This Engagement is for two players. One player will be the Attacker and the other will be the Defender. Objectives have the following profile.

Structure Points	Armour
8	5+

Victory Conditions

At the end of the Engagement, the Defender scores 2 victory points for every objective still on the battlefield. The Attacker scores 1 victory point for each objective they have destroyed. The Attacker also receives 1 victory point for each enemy Rig they have destroyed.

The player with the most victory points wins. If players have the same amount of victory points, the Defender wins.

CAMPAIGN

In the shadow of smoldering cities and the rusting hulks of a world that once thrived, the Smoglands have become the ultimate battleground. Oil seeps through cracked earth like blood, and iron glimmers beneath the ash-streaked soil, a promise of power for those bold enough to claim it.

In this brutal era of decay, corporations rise from the ruins, each with a singular goal: dominance. Titans of industry deploy monstrous Rigs to crush resistance, while others fight to wrestle control from their grasp.

Yet the road to supremacy is treacherous. The land is scarred with toxic storms and the remnants of countless failed revolutions. Mercenaries, drawn by the clink of coin sell their firepower to the highest bidder. Every skirmish leaves wreckage to scavenge, every victory comes at a cost, and every defeat is a warning whispered on the winds of the wastes.

Now, the struggle begins. The roads of this broken world await your mark. Will your chosen corporation carve its name into history as conquerors of the Smoglands, or be swallowed by the ever-turning gears of war?

Campaigns are made up of a series of linked games in which players control an evolving Squadron of Rigs. In a Campaign, each player builds a starting Squadron, plays a series of engagements and advances their Squadron through repairs, upgrades and Ironclad progression.

Starting a Campaign

Each player commands a Squadron composed of Rigs from a single faction. Before embarking on a campaign, players must assemble their Squadron with the following restrictions:

- Start with a Skirmish sized Squadron.
- Each player starts with 15 Iron to distribute across their starting Squadron.
- Ironclads may only start as Rookie or Experienced.
- Each player maintains a Squadron Roster, tracking the status of their forces over time.
- Players earn salvage and Ironclad experience through each engagement. These rewards are used to repair, improve and expand the Squadron during the campaign.

Campaign Structure

A campaign is played by linking together the individual Engagements that the group chooses, followed by and Aftermath Phase. Players may play against any other participant in the campaign.

Psychomystile
© Scoutsifer Studio. All Rights Reserved

Winning the Campaign

A campaign is played as a season of a fixed number of Engagements agreed by the group six is the recommended default; eight to ten for a longer war. Players track Renown alongside Salvage on their Roster. Renown is the measure of a Squadron's dominance over the season.

After each Engagement, each player earns Renown:

- 3 Renown for winning an Engagement (1 if it is a draw)
- 1 Renown for each enemy Rig destroyed
- 1 Renown for each Objective captured

When the season's final Engagement is complete, the player with the most Renown is the victor of the campaign. If tied, the player who destroyed the most enemy Rigs across the season wins.

Fielding Your Squadron

A player's Squadron Roster may grow far beyond the size of any single battle. For each Engagement, both players agree a Formation type (Skirmish, Operation, or Warfront) and each fields a Squadron Type from that Formation, drawn from the Rigs on their Roster. Rigs not chosen are held in reserve and take no part in that battle. Players may field different Squadron Formations of the Formation Type.

Roster depth therefore protects players against losses rather than letting them overwhelm an opponent: a larger Roster means more choice and replacements ready for the next contract, not more Rigs on the table.

If a player cannot field the agreed Formation, because losses have reduced their Roster below its requirements, they field as many Rigs as they can and immediately receive Underdog Reinforcement to rebuild before the next Engagement.

Engagements

Before each Engagement:

1. Select an Engagement or roll randomly for one. *(p67-72)*

2. Select a Deployment or roll randomly for one. *(p65-66) Some Engagements require a specific Deployment.*

3. Select a Battlefield. The Battlefield is a suggestion for terrain type, and has effects for aftermath sequence, awarding players (or sometimes damaging Rigs!).

4. Play the Engagement normally.

Salvage and Experience

Throughout a campaign, players earn Salvage and Ironclad Experience based on their performance in engagements. Salvage allows Squadrons to repair damaged Rigs and purchase new equipment and Rigs. Salvage represents the material gains recovered from the battlefield, while Experience reflects the knowledge and skill gained by Ironclads through surviving repeated combat.

Both Salvage and Experience are gained after each engagement during the Aftermath Phase. Keep track of all Salvage and Experience on the Squadron Roster.

Event	Salvage
Winning an Engagement	D6
Losing an Engagement	D3
Destroyed a light Rig	1
Destroyed a medium Rig	1
Destroyed a heavy Rig	2
Destroyed a colossal Rig	3
Captured an Objective	1
Capture a Salvage Objective	3

Certain Engagements may have special rules that reward various amounts of salvage or experience.

In the event of an Engagement draw, both players receive the winning rewards.

Earning Salvage

Objectives: Many engagements feature objectives that can be captured. Each objective captured during the game awards 1 Salvage per Victory Point. Salvage Objectives award 3 Salvage.

Destroying Rigs: When a player destroys an enemy Rig, they earn Salvage based on the Rig's weight class. Heavier Rigs yield more recoverable parts.

Battlefield Salvage: At the end of the engagement, players may salvage the battlefield. This represents crews sweeping the area for usable parts.

Battlefield Bonuses: Certain battlefields provide additional Salvage based on the environment. For example, winning a battle in a Iron Mine or Rig Graveyard may award extra Salvage due to the abundance of scrap. Each battlefield lists its specific bonuses in the table below.

Roll	Battlefield	Loss Aftermath Effect	Victory Aftermath Effect
1	Wasteland	+1 Salvage	+3 Salvage
2	Oil Field	1 Free Repair	3 Free Repairs
3	Iron Mine	+2 Salvage	+5 Salvage
4	Salvage Yard	1 Free Equipment, +1 Salvage	2 Free Equipment, +2 Salvage
5	Settlement	+1 XP for each Ironclad	+2 XP for each Ironclad
6	Rig Graveyard	1 Light Rig, +1 Salvage	1 Medium Rig, +2 Salvage
7	Rig Hangar	1 Heavy Rig, +1 Salvage	1 Heavy Rig, +3 Salvage
8	Industrial Complex	1 Free Weapon, +1 Salvage	2 Free Weapons, +2 Salvage
9	City Centre	+2 XP for 1 Ironclad	+5 XP for 1 Ironclad
10	Fuel Depot	2 Free Repairs, +1 Salvage	4 Free Repairs, +2 Salvage
11	Toxic Flats	2 damage to 1 Rig	2 damage to 2 Rigs
12	Storm Belt	3 damage to 1 Rig	3 damage to 2 Rigs

Earning Ironclad Experience

Ironclads gain Experience by participating in engagements and surviving the trials of combat. Experience allows Ironclads to level up, granting them re-rolls and other bonuses.

Survival: An Ironclad gains Experience for surviving an engagement.

Objectives and Combat: Ironclads earn Experience for capturing objectives and for destroying enemy Rigs. The amount gained is listed in the mission or in the Experience table.

Event	XP
Ironclad survives the Engagement	1
Destroyed a light Rig	1
Destroyed a medium Rig	2
Destroyed a heavy Rig	3
Destroyed a colossal Rig	4
Captured or secured an objective	1

Using Your Rewards

Salvage and Experience are spent or applied during the Aftermath Phase. Players decide whether to repair damaged Rigs, purchase new equipment, or expand their Squadron.

Growing a Squadron requires careful resource management, balancing risk, reward and long-term strategy as the campaign unfolds.

Aftermath Phase

After each engagement, players complete the Aftermath Phase, which includes:

1. Check if destroyed Rigs are lost
2. Check for damage and repair Rigs
3. Check if Ironclads are lost
4. Ironclad Experience
5. Salvage the Battlefield
6. Underdog Reinforcements
7. Visit the Iron Market

Players repeat this process after every Engagement.

1. Check if destroyed Rigs are lost

Roll a D12 for each Rig destroyed during the Engagement.

- A Rig that *did not explode* is recovered on a 2+
- A Rig that *exploded* is recovered on a 7+

On a failure, the Rig is permanently lost and removed from the Roster. A recovered Rig returns with the components that were Disabled or Catastrophically Damaged at the moment of its destruction; all other components retain the Structure Points they had when the Rig was destroyed. Catastrophically Damaged or Disabled components are repaired during step 2.

2. Check for damage and repair Rigs

Rigs carry over any damage sustained during an Engagement and may be repaired between Engagements.

- Each Rig may repair any 3 Structure Points for free. After which, repairs can be made at the cost of 1 Salvage for every 3 Structure Points repaired (1 Salvage minimum).
- Restoring a Disabled component to Catastrophically Damaged costs 1 Salvage.
- Restoring a Catastrophically Damaged component to full Structure Points costs 1 Salvage.
- Whenever a Catastrophically Damaged or Disabled component is repaired, it gains one permanent negative trait, rolled on the Permanent Damage table for that component (roll a D6). If the rolled trait is already present, roll again.

Roll	Damage Trait	Hull Effects
1-2	Load Frame Buckled	-1 maximum Iron. If over capacity, remove equipment as necessary
3-4	Layered Hull Breach	-2 to hull armour rolls
5-6	Structural Integrity Compromised	All components have -1 maximum Structure Points
Roll	**Damage Trait**	**Arms Effects**
1-2	Disrupted Targeting Optics	-1 ACC when attacking with this weapon
3-4	Hydraulic Pressure Loss	This weapon has -1 STR (to a minimum of 1)
5-6	Ignition Routing Fault	Backfires on a roll of 1 when firing, dealing 1 damage to the arms, once per attack action
Roll	**Damage Trait**	**Legs Effects**
1-2	Clutch Degradation	Speed is reduced by 1” (to a minimum of 1”)
3-4	Rotation Joint Seizure	Pivot is reduced by half
5-6	Reverse Drive Cutout	Cannot backpedal or sidestep
Roll	**Damage Trait**	**Engine Effects**
1-2	Radiator Bypass Failure	Add +1 to all Heat Threshold rolls
3-4	Heat Exchanger Buckled	Heat Threshold moves one space to the left on the Heat Track
5-6	Exhaust Routing Collapse	Engine Exhaust is reduced by 1

3. Check if Ironclads are lost

Even if a Rig is destroyed, its Ironclad may survive. Roll a D12 for each Ironclad whose Rig was destroyed.

- If the Rig *did not explode*, the Ironclad survives on a 2+
- If the Rig *exploded*, the Ironclad survives on a 5+

Otherwise the Ironclad is lost and must be replaced with a Rookie. A surviving Ironclad whose Rig was lost may be reassigned to a newly acquired Rig, retaining their Experience, Level, and Re-Rolls.

4. Ironclad Experience

Experience is gained by surviving, capturing objectives and destroying enemy rigs.

At the end of an Engagement, apply experience gained by Ironclads, level them up and assign the relevant level perks.

When an Ironclad levels up, they acquire a level perk. Level perks offer re-rolls or promotions. If an Ironclad can be promoted, they must take the promotion.

Re-rolls can each be used once per game. The number of re-rolls resets each new game.

Level	XP	Level Perk
1	0	Starting Ironclad
2	3	+1 Re-roll
3	6	+1 Re-roll
4	10	Ironclad Promotion *OR* +1 Re-roll
5	15	+1 Re-roll
6	20	+1 Re-roll
7	25	Ironclad Promotion *OR* +1 Re-roll
8	30	+1 Re-roll
9	35	+1 Re-roll
10	40	Ironclad Promotion *OR* +1 Re-roll

Salvage Table

Result	**Reward**
1	Nothing of value
2	3 Salvage
3	5 Salvage
4-6	Roll a D12 on Equipment Table A
7-9	Roll a D12 on Equipment Table B
10-12	Roll a D12 on Equipment Table C
13	Any destroyed Rig

5. Salvage the Battlefield

After a battle, a Squadron's surviving Rigs scour the wreckage for parts and abandoned machines. For each surviving Rig, roll a D12 and consult the Salvage table and gain that reward.

Add +1 to the roll if this Rig landed the final blow on an enemy Rig during the Engagement.

When acquiring a destroyed Rig, its stats remain the same as when it was destroyed. It may be repaired or scrapped for salvage. It must have been destroyed during the previous Engagement. If no Rigs were destroyed, nothing is acquired.

6. Underdog Reinforcement

Compare the total Salvage value of each player's Roster (sum the recruit cost of every Rig, plus banked Salvage). The player with the *lower* total receives bonus Salvage equal to D3 at the end of each Engagement. If a player was unable to field the agreed Formation, they instead receive an additional D6 Salvage and may rebuild before the next Engagement. This reinforcement represents sympathetic backers, desperate scavenging, and contracts of opportunity flowing to the underdog.

Psychomystic

7. Visit the Iron Market

When visiting the Iron Market, players may spend Salvage to buy weapons, equipment and recruit new Rigs for their Squadron. Rigs and Equipment a player owns goes into their "Hangar", representing an inventory that holds the player's Rigs and Equipment, that can be stored until they are used.

Weapons and Equipment may be bought for the amount of Salvage equal to its Iron cost on the equipment table.

Recruiting a Rig represents acquiring a new chassis, refurbishing a recovered Rig or negotiating a corporate contract for additional war assets. New Rigs allow a Squadron to expand its operational capacity and replace machines lost during the campaign. A Rig may be purchased for its Salvage cost using the table below.

Rig Type	Salvage Cost	Starting Iron
Light Rig	4	5
Medium Rig	8	5
Heavy Rig	12	6
Colossal Rig	16	6

Equipping the Rig

- A newly recruited Rig must be equipped before it can take part in an engagement.
- A Rig comes with 5 or 6 Iron to spend on weapons (see table).
- A Rig must have at least two weapons.
- Additional Weapons and equipment are purchased separately from the Iron Market at their listed Salvage cost, which is the same as their Iron cost.
- A Rig cannot exceed its maximum Iron capacity when equipped.

Assigning an Ironclad

A new Rig is assigned an Ironclad from the player's roster.

If a Squadron has no unassigned Ironclads, they may recruit a new one or transfer an existing Ironclad from another Rig. Ironclads retain their Experience, levels and re-rolls when reassigned.

New Ironclads are recruited for their Iron cost using Salvage. Only Rookie or Experienced Ironclads can be recruited.

Repair Status of Newly Recruited Rigs

All newly purchased Rigs begin the campaign fully operational with:

- All components at full structure points
- No permanent negative traits
- No catastrophic or destroyed components

These Rigs are considered fresh deployments brought in from storage, transport or corporate supply.

Once a Rig is purchased, equipped and assigned an Ironclad, it becomes part of the player's active Squadron. It may be deployed in any future engagement with its Squadron.

Second-Hand Rigs

Not every Rig that enters a Squadron is fresh from a factory floor. Across the Smoglands, damaged Rigs can be repaired, restored or welded together to be made serviceable. These battered Rigs are known as second-hand Rigs, and they provide a cheaper alternative for Squadrons operating with limited Salvage, but they always come with permanent drawbacks.

Second-Hand Rigs can be purchased at 50% the Salvage cost. When second-hand Rig is purchased, it automatically starts with permanent damage and lost structure points.

Psychomystile
© Scoutsifer Studio. All Rights Reserved

Roll once on the Permanent Damage table for each of the following components:

- Legs
- Weapon (choose one mounted weapon)
- Hull
- Engine

A second hand Rig therefore starts with four permanent negative traits, one for each component type.

These traits represent structural fatigue, faulty systems, mismatched parts or previous battlefield traumas. Players may not remove these permanent traits through repairs.

In addition, roll 1 D3 for each component. They start with that much damage.

Scrapping Rigs and Equipment

While visiting the Iron Market, Rigs and Equipment can be scrapped or sold for salvage at half of their stated salvage costs, rounded up.

Mercenary Nomad for Hire

Squadrons operating in the Smoglands often call upon independent Ironclads to reinforce their forces. These hired guns do not join the Squadron permanently, but offer temporary support during moments of desperation or opportunity.

A Mercenary Support Slot provides a simple way for players to stay competitive in a campaign, especially if they have suffered heavy losses or fallen behind in Salvage.

Hiring a Mercenary Rig

Once per campaign, during the Aftermath phase, a player may hire a Mercenary Rig for a single engagement.

Restrictions on Mercenary Rigs

A Mercenary Rig is used for one engagement only, then leaves the Squadron and cannot be retained. Mercenary Rigs are piloted by hired operators and have the following restrictions:

- A Mercenary Rig costs no Salvage.
- The Rig is temporary and does not join the Squadron roster.
- A Mercenary Rig may be a Light or Medium Rig (Heavy and Colossal Rigs are too costly or rare for short-term contracts.)
- Mercenary Ironclads never gain or spend Experience, and cannot be assigned to other Rigs.
- Cannot capture or secure objectives
- If destroyed, a Mercenary Rig is simply lost. It may still be acquired through salvage.

Equipping a Mercenary Rig

A Mercenary Rig comes pre-equipped with a basic loadout provided by the contractor. They come with their relevant starting Iron dependant on their weight class to spend on Weapons and Equipment. Rigs must always have two weapons equipped.

QUICK REFERENCE

Phases of a Round:

Initiative Phase: Roll a D12 to determine starting player.

Activation Phase: Take turns activating Rigs.

Maintenance Phase: Roll for Heat Threshold, Reduce heat by Exhaust value, handle other end of round effects.

Actions (up to 5 per Rig):

Action	Heat
Move	1
Fire Weapon	1
Melee Attack	1
Called Shot	1
Ram	1
Reload	1
Repair	1
Shut Down	0
Prepare	1
Use Equipment	X

Move [1] up to full speed, pivot up to 90 degrees, backpedal and side step at half speed.

Fire Weapon / Melee Attack [1]

Called Shot [1] choose hit location, -2 ACC, cannot hit engine from front arc.

Ram [1]

Weight Class	Hit STR	Push Back
Light	D6 + 1	2”
Medium	D6 + 2	2”
Heavy	D6 + 3	3”
Colossal	D6 + 4	3”

Reload [1] all weapons

Repair [1] remove one condition or roll a D3 to repair that many structure points.

Shut Down [0] forfeit activation to reduce engine heat to 0

Use Equipment [X]

Prepare [1] place relevant token face down

- **Prepare Evasive Manoeuvre:** move when targeted by an attack
- **Prepare Return Fire** : retaliate with an attack
- **Prepare Brace for Incoming Fire**:+2 armour roll against first front facing attack

Attacking:

1. Declare attacker and target

2. Check range (after declaring target)

3. Verify line of sight

Light cover: -1 ACC; Heavy cover: -2 ACC

4. Roll to hit

5. Apply weapon effects

6. Determine impact location

Roll	Impact Location
1-4	Hull
5-7	Arms
8-10	Legs
11-12	Engine

7. Calculate damage

Add together:

+ Total strength from each successful hit

+ 2 if attacking the side arc

+ 4 if attacking the rear arc

+ Perks

8. Make Armour Rolls, negate 1 damage for each success.

9. Update Rig’s structure points

Heat Threshold:

In the Maintenance Phase, each Rig rolls a D12 plus engine heat and compares the result:

Result	Description	Effect
1-5	Nothing Happens	The engine performs as intended.
6-7	System Stall	Suffer 2 damage to the Hull. The Rig is *Stalled.*
8-9	Hydraulic Blowout	Suffer 2 damage to the Legs. The Rig is *Slowed.*
10-11	Ammunition Detonation	Suffer 2 damage to the Arms. The Rig is *Shocked.*
12-13	Fuel Line Rupture	Roll for an impact location. That component becomes *Ruptured.*
14-15	Structural Buckling	Each component suffers 1 damage (Hull, Engine, Arms, Legs).
16-17	Emergency Shutdown	The Rig powers down automatically. It cools to safe levels, reduce the heat to the start of the Heat Track, but must skip its next activation.
18	Chain Reaction	Each component suffers 1 damage (Hull, Engine, Arms, Legs) *Roll again!*
19	Engine Failure	The Engine's structure points are reduced to 0 and suffers C*atastrophic Damage.* If it is already *Catastrophically Damaged,* it becomes Disabled.
20+	Catastrophic Failure	The Rig suffers *Catastrophic Damage* to all components. Heat can no longer be decreased.

Catastrophic Damage:

When a component's Structure Points reach 0, it becomes *Catastrophically Damaged* and the effects below apply. Further damage to a *Catastrophically Damaged* component *Disables* it. Two *Disabled* components destroy the Rig.

Location	Catastrophically Damaged	Disabled
Hull	The Rig is *Stalled.*	The Rig is stalled and *Shocked.*
Arms	Roll a D12 to determine affected arm. 1-3 left, 4-6 right, that weapon is *Disabled.*	Both weapons are *Disabled.*
Legs	The Rig is *Slowed*	The Rig is *Immobilised.* It can still pivot.
Engine	Move heat to Heat Threshold if heat is below	Heat cannot be Exhausted / reduced.

RULES GLOSSARY

ACC (Accuracy) - A modifier applied to attack rolls that makes attacks easier or harder to hit.

Action - A task a Rig performs during its activation, such as moving, firing weapons, repairing, or preparing a reaction.

Activation - A Rig's turn during the Activation Phase. A Rig may perform up to 5 actions when activated.

Arc - The directional facing zones of a Rig: Front, Side, and Rear.

Armour - A defensive value representing a Rig component's ability to resist damage.

Armour Piercing X - A weapon perk that increases the target Rig's armour roll target number by X.

Armour Roll - A defensive roll made after damage is calculated. Each successful result equal to or above the armour value negates 1 damage.

Bombardment - A weapon perk allowing attacks without line of sight at long range.

Breaching - A weapon perk where critical hits inflict 1 direct damage to the affected component without an Armour Roll.

Called Shot - An attack that targets a specific component instead of rolling for impact location, suffering -2 ACC.

Campaign - A linked series of engagements where Rigs, Ironclads, salvage, and damage persist between battles.

Catastrophically Damaged - A component reduced to 0 Structure Points. It suffers severe penalties and cannot be repaired.

Chain Reaction - A Heat Threshold result causing all components to suffer damage before rolling again on the Heat Threshold table.

Colossal Rig - The largest Rig weight class, mounted on an 80mm base.

Component - A section of a Rig: Hull, Arms, Legs, or Engine.

Condition - A status effect affecting a Rig's performance, such as Shocked, Slowed, or Stalled.

Cover - Terrain or obstruction reducing the effectiveness of attacks. Cover may be Light or Heavy.

Critical Hit - Triggered when an attack roll scores a natural 6, or by certain weapon perks.

D3 - A three-result roll generated using a D6: 1–2 = 1, 3–4 = 2, 5–6 = 3.

D6 - A six-sided dice.

D12 - A twelve-sided dice.

Damage Pool - The total attack strength generated before Armour Rolls are made.

Deployment - The starting positions of both squadrons at the beginning of an engagement.

Destroyed - The state of a whole Rig once 2 of its components are Disabled, removing it from play.

Disabled - A component that has taken further damage after becoming Catastrophically Damaged. Disabled components cannot be Repaired (except between battles in a Campaign) or targeted further. If 2 of a Rig's components are Disabled, the Rig is Destroyed.

Emergency Shutdown - A Heat Threshold result where a Rig cools to safe levels but skips its next activation.

Engagement - A single battle played in Of Oil and Iron.

Engine - The Rig component responsible for heat management and power generation.

Engine Exhaust - The amount of heat removed during the Maintenance Phase.

Engine Failure - A catastrophic Heat Threshold result causing immediate catastrophic damage to the Engine component.

Explode - A destructive effect that may occur when a Rig is destroyed, damaging nearby Rigs.

Explosive X - A weapon perk causing secondary damage to nearby units within X".

Fire Weapon - An action allowing a Rig to attack using a ranged weapon.

Flanking - A weapon perk that increases damage when attacking side (+2) or rear (+4) arcs.

Front Arc - The primary facing direction of a Rig. Most weapons can only fire into this arc.

Heat - A resource generated by actions and weapons. Excessive heat risks catastrophic engine effects.

Heat Threshold - The danger zone on the heat track where engine failures may occur, the first numbered space (even a 0+).

Heavy Cover - Cover that heavily obscures a Rig, applying -2 ACC to attacks.

Hit Location - The component struck by an attack, determined by a D12 roll or Called Shot.

Hot - A weapon perk that may generate additional engine heat after attacking.

Hull - The central body component of a Rig.

Hull Weapon - A weapon mounted internally or centrally on a Colossal Rig.

Immobilised - A condition preventing a Rig from moving, though it may still pivot.

Impact Location - The component struck when resolving attacks.

Impale - A weapon perk that applies the Immobilised condition on a critical hit.

Improbable Result - A roll requiring 7+ on a D6. Resolve by rolling 6s, then re-rolling them for 4+ successes.

Incendiary X - A weapon perk increasing the target Rig's engine heat by X when hit.

Initiative - Determines activation order each round, a contested roll with +1 for each Light Rig.

Iron - The loadout capacity of a Rig used to equip weapons and equipment.

Ironclad - A Rig pilot whose skill determines the Rig's Aim value.

Light Cover - Partial cover applying -1 ACC to attacks.

Line of Sight (LOS) - Determines whether one Rig can see and target another.

Maintenance Phase - The final phase of a round where heat, repairs, and end-of-round effects are resolved.

Melee - A weapon perk indicating the weapon does not require reloading.

Melee Attack - An attack made using melee weapons at close range.

Natural Roll - A dice result unaffected by modifiers, such as a natural 1 always failing.

Objective - A marker or battlefield location used for mission scoring.

Penetrating - A weapon perk where hit rolls of 5+ count as critical hits.

Permanent Negative Trait - A lasting penalty gained when repairing catastrophically damaged or destroyed components during campaigns.

Pivot - Rotating a Rig during movement.

Precision - A weapon perk allowing Called Shots without suffering the -2 ACC penalty.

Prepare - An action allowing a Rig to set a hidden reaction that may trigger during the opponent's activation.

Prepare Brace for Incoming Fire - A Prepare action granting +2 to Armour Rolls against the next front or side facing attack.

Prepare Evasive Manoeuvre - A Prepare action allowing a Rig to move when targeted by an attack.

Prepare Return Fire - A Prepare action allowing a Rig to retaliate after being attacked.

Ram - An action allowing a Rig to crash into an enemy after moving at least 2". Both Rigs suffer hits based on the attacker's weight class.

Rate of Fire (ROF) - The number of attack dice rolled when firing a weapon.

Rear Arc - The vulnerable rear facing of a Rig. Attacks here gain additional damage (+4).

Reload - An action required to fire ranged weapons again during the same activation.

Repair - An action used to restore Structure Points or remove conditions.

Rig - A diesel-powered war machine piloted by an Ironclad.

Rig Control Terminal - The primary game asset used to track a Rig's stats, damage, heat, and loadout.

Round - A complete cycle of Initiative, Activation, and Maintenance phases.

Ruptured - A persistent condition causing ongoing damage.

Salvage - Resources recovered after engagements and used during campaigns.

Shock - A weapon perk that applies the Shocked condition on a critical hit.

Shocked - A condition reducing a Rig's ACC (-1) and SPD (-1).

Side Arc - The side facing of a Rig. Attacks here gain additional damage (+2).

Slowed - A condition reducing a Rig's Speed.

Smogfall - The industrial catastrophe that poisoned the skies and reshaped civilisation.

Smoglands - The polluted wasteland where Of Oil and Iron takes place.

SPD (Speed) - The maximum movement distance of a Rig, in inches.

Squadron - A collection of Rigs controlled by a player.

Staggering - A weapon perk that may pivot or push the target Rig after a successful hit.

Stalled - A condition causing a Rig to lose 2 actions during its next activation.

STR (Strength) - The power of a weapon's attack.

Structure Points - The durability value of a Rig component.

Sustained Fire - A weapon perk increasing damage output through repeated hits.

Volatile - A weapon perk increasing damage while above the Heat Threshold.

Weapon Perk - A special rule attached to a weapon that alters its behaviour or effectiveness.

Weapon Slot - A mounting point available for equipping weapons on a Rig.

Weight Class - The category of Rig size: Light (40mm base), Medium (50mm base), Heavy (60mm base), or Colossal (80mm base).

FINAL TRANSMISSION

The engines will cool.The smoke will settle.

The wrecks will be stripped down to bare frames and broken pistons.

Oil will be siphoned from the fallen.

Names will be carved into iron, or forgotten beneath it.

There are no clean victories in the Smoglands. Only contracts fulfilled.

Only survivors who live long enough to take the next one.

Corporations will claim control. Rebels will claim freedom.

And somewhere between the two, a Rig will ignite its engine for the first time… or its last.

This book is not a manual.

It is a toolbox, a warning, and an invitation.

Bend the rules when the story demands it. Write new contracts.

Let Rigs earn names, reputations, and scars that outlive their pilots.

When the battlefield falls silent, remember this:

The war doesn't end. It just changes hands.

Warm up your engines.

The next contract is already waiting.
